anisotropy decay curves multispectral lifetime experiments recording of transient fluorescence lifetime phenomena and measurements of phosphorescence decay curves the second part of the chapter is dedicated to time resolved laser scanning microscopy it contains sections on a wide variety of fluorescence lifetime imaging flim experiments and procedures such as flim with various excitation principles excitation sources and detection principles high speed and time series flim z stack flim simultaneous fluorescence and phosphorescence lifetime imaging flim plim fluorescence lifetime transient scanning flits and flim with special microscope configurations a third part contains flim background knowledge signal to noise ratio acquisition time the effect of counting loss and pile up photobleaching and fluorescence depolarisation on the recorded data the book contains a large chapter on tcspc applications most of them in biology it contains sections on flim of molecular environment parameters in tissue flim based fret measurements in cells autofluorescence flim of biological tissue plant physiology and clinical flim applications a section about diffuse optical tomography dot by nirs techniques includes breast imaging static and functional brain imaging perfusion measurement in the human brain diffuse tissue spectroscopy and small animal imaging picosecond photon correlation fluorescence correlation spectroscopy burst integrated fluorescence lifetime techniques and photon counting histogram techniques are reviewed in the next sections the last part of the application chapter gives an review of non biological tcspc applications like positron lifetime measurement measurement of barrier discharges remote sensing metrological applications and characterisation of detectors the application chapter also includes practical hints about optical systems detectors and other technical aspects of the applications described another large chapter describes the spcm operating software of the bh spc modules it describes the various user interface configurations operation modes the system and control parameters the handling and display of the multidimensional data recorded by the modules and the associated data file structure the tcspc handbook also contains a chapter on the spcimage ng fluorescence decay and flim data analysis software it describes the general principles of fluorescence decay analysis the calculation of fluorescence decay parameters and lifetime images by various decay models pseudo global analysis multi wavelength flim analysis batch processing of flim series and analysis of plim data the handbook ends with a list of more than 1200 references related to tcspc most of them being applications of the bh spc devices
