It will explore potential causes such as genetic predisposition, learned anxieties, and stressful life events. Treatment approaches like Cognitive Behavioral Therapy (CBT), which helps individuals identify and challenge negative thought patterns, and medication such as SSRIs will also be discussed.

**Visual: The Biopsychosocial Model** Imagine a Venn diagram. One circle represents biological factors (genetics, brain chemistry). Another represents psychological factors (thoughts, feelings, behaviors). The third represents sociocultural factors (family dynamics, social support, culture). The overlapping areas show how these factors interact to contribute to the development of psychological disorders. This is the biopsychosocial model, a key framework often discussed in abnormal psychology texts.
