the first international congress of the international society for analysis its applications and computations isaac 97 was held at the university of delaware from 3 to 7 june 1997 as specified in the invitation of the president professor robert p gilbert of the isaac we organized the session on reproducing kernels and their applications in our session we presented 24 engaging talks on topics of current interest to the research community as suggested and organized by professor gilbert we hereby publish its proceedings rather than restricting the papers to congress participants we asked the leading mathematicians in the field of the theory of reproducing kernels to submit papers however due to time restrictions and a compulsion to limit the proceedings a reasonable size we were unable to obtain a comprehensive treatment of the theory of reproducing kernels nevertheless we hope this proceedings of the first international conference on reproducing kernels will become a significant reference volume indeed we believe that the theory of reproducing kernels will stand out as a fundamental and beautiful contribution in mathematical sciences with a broad array of applications to other areas of mathematics and science we would like to thank professor robert gilbert for his substantial contributions to the congress and to our proceedings we also express our sincere thanks to the staff of the university of delaware for their manifold cooperation in organizing the congress

this monograph is the first to give a comprehensive account of the theory of semiconductor cavity quantum electrodynamics for such systems in the weak coupling and strong coupling regimes it presents the important concepts together with relevant recent experimental results

with the publication of this book i discharge a debt which our era has long owed to the memory of a great mathematician of antiquity to publish the lost books of the conics of apollonius in the form which is the closest we have to the original the arabic version of the banu musil until now this has been accessible only in halley's latin translation of 1710 and translations into other languages entirely dependent on that while i yield to none in my admiration for halley's edition of the conics it is far from satisfying the requirements of modern scholarship in particular it does not contain the arabic text i hope that the present edition will not only remedy those deficiencies but will also serve as a foundation for the study of the influence of the conics in the medieval islamic world i acknowledge with gratitude the help of a number of institutions and people the john simon guggenheim memorial foundation by the award of one of its fellowships for 1985-86 enabled me to devote an unbroken year to this project and to consult essential material in the bodleian library oxford and the bibliotheque nationale paris corpus christi college cambridge appointed me to a visiting fellowship in trinity term 1988 which allowed me to make good use of the rich resources of both the university library cambridge and the bodleian library
