the birth of a mass consumer society in western europe has been the subject of much scholarly debate in recent years in order to
come to a further understanding of the issue this book adopts an analytical approach paying special attention to the socio cultural
and economic transfers which occur when different commodities are introduced to territories with diverse values and identities in
particular it examines the role of merchants and their important influence on consumer decisions describing how they created
demand for new necessities in local national and international markets of the western mediterranean area through a systematic
analysis of probate inventories from southern spain the study reveals shifts in the patterns of consumption of new goods in urban
and rural families underlining a growing interest in new exotic and foreign goods by connecting these local desires aspirations and
choices to a global movement in which human and material capital circulated trans continentally broader patterns of consumption

are revealed by observing a southern european society such as spain where the industrialization process was slower than that in anglo saxon territories the book contributes to the on going debates about industrious revolution and trickle down theories and whether both occurred simultaneously or separately the book also helps identify the socio economic forces and agents that prompted the stimulus for new consumer aspirations as well as the cultural consequences that the new modern consumerism brought about

international spillovers and exchange rate dynamics are examined in a two country dynamic optimizing model that allows for home product bias in consumption patterns at given relative prices the ratio of home goods consumed to foreign goods consumed is higher in the home country the setup nests Obstfeld and Rogoff 1995 who assume identical tastes with home bias results are different in three ways when preferences are biased the wealth transfers associated with current account imbalances induce movements in the real exchange rate and produce large short run and small long run deviations from consumption based purchasing power parity with home bias interest rates both real and nominal can differ across countries relatedly home bias is a necessary but not sufficient condition for Dornbusch 1976 type exchange rate overshooting finally in this model the welfare effects of expansionary monetary policy depend not only on world demand but also on the expenditure switching effect of an exchange rate depreciation monetary policy is beggar thy neighbor if individuals have strong preferences for domestic products but can be beggar thyself if instead imported goods are preferred

economic policy presents an authoritative selection of articles which have played a key role in influencing the direction of economic theory and methodology and thus the policy prescriptions which macroeconomists give to decision makers volume I contains the most influential articles which have shaped the main debates in macroeconomic theory since its foundation it covers such topics as the debate between Keynes and the Keynesians the dispute between Keynes and the monetarists the rational

expectation revolution and critiques of that approach and the debate between new classical theorists and new keynesian theorists also included are papers which have defined alternative methodological approaches to modelling the macroeconomy volume ii investigates some important applications of economic policy analysis it examines some of the key economic problems on the political agenda such as the record of monetarism the problems of trade and structural unemployment european monetary integration and the reform of post communist societies and assesses the extent to which economic research throws light on these problems

includes annual list of doctoral dissertations in political economy in progress in american universities and colleges and the hand book of the american economic association

this paper considers the likely effect on the automobile industry of a free trade agreement between the u s and mexico as there are currently large restrictions on imports into mexico one important outcome of a free trade agreement would be the opening of the mexican market to u s producers this is consistent with the history of the international auto industry and the fact that the u s canada auto pact opened a new large market to u s manufacturers the current state of the mexican auto industry is considered in great detail suggesting that the mexican industry will continue to prosper increasing output but also relying heavily on production from u s owned plants and on inputs imported from the u s and canada however much of the existing domestically oriented industry is likely to be replaced by other north american producers finally an econometric demand analysis implies that economic growth together with declines in prices to world levels could rapidly expand the size of the mexican auto market the free trade agreement represents an opportunity for product diversification and rationalization in the auto industry

several puzzling aspects of the behavior of united states stock prices can be explained by the presence of a specific type of

rational bubble that depends exclusively on dividends we call such bubbles intrinsic bubbles because they derive all of their variability from exogenous economic fundamentals and none from extraneous factors unlike the most popular examples of rational bubbles intrinsic bubbles provide an empirically plausible account of deviations from present value pricing their explanatory potential comes partly from their ability to generate persistent deviations that appear relatively stable over long periods
