nmr spectroscopy is widely used in biomolecular science particularly for structure determination of proteins nucleic acids and carbohydrates much of the innovation within nmr spectroscopy has been within the field of protein nmr spectroscopy an important technique in structural biology filling a gap in the literature this book draws together experts in the field to discuss the real advances in nmr methods that have occurred or have an impact on the biomolecular field in the last few years the coverage includes recent developments in using nmr for determination of protein structures membrane proteins the dynamics of rna and advances in nmr in drug discovery edited by leading biological nmr spectroscopists the book is essential reference for researchers in industry and academia interested in or joining this bioanalytical field

nmr spectroscopy has found a wide range of applications in life sciences over recent decades providing a comprehensive amalgamation of the scattered knowledge of how to apply high resolution nmr techniques to biomolecular systems this book will break down the conventional stereotypes in the use of nmr for structural studies the major focus is on novel approaches in nmr which deal with the functional interface of either protein protein interactions or protein lipid interactions bridging the gaps between structural and functional studies the editors believe a thorough compilation of these studies will open an entirely new dimension of understanding of crucial functional motifs this in turn will be helpful for future applications into drug design or better understanding of systems the book will appeal to nmr practitioners in industry and academia who are looking for a comprehensive understanding of the possibilities of applying high resolution nmr spectroscopic techniques in probing biomolecular interactions
