New and fully updated to cover the last 10 years of accessibility research published since the first edition, this book covers key areas of evaluation and methodology, client-side applications, specialist and novel technologies, along with initial appraisals of disabilities. It provides comprehensive coverage of accessibility research, building on the first. This second edition places more focus on mobile technologies, applications, the Internet of Things, and future developments where, as we know, it is blending into infrastructure and where-based interface design has become predominant. Written by leading experts in the field, it provides an overview of existing research and also looks at future developments, providing a much deeper insight than can be obtained through existing research libraries, aggregations, or search engines. In tackling the subject from a research rather than a practitioner standpoint, scientists, engineers, and postgraduate students will find a definitive and foundational text that includes field overviews, references, issues, new research problems and solutions, and opinions from industrial experts and renowned academics from leading international institutions, including W3C, Google, IBM, and CMU, Colorado, and Lisbon Universities.
