race in the united states has long been associated with heredity and inequality while ethnicity has been linked to language and culture in the shadow of race recovers the history of this entrenched distinction and the divisive politics it engenders victoria hattam locates the origins of ethnicity in the new york zionist movement of the early 1900s in a major revision of widely held assumptions she argues that jewish activists identified as ethnics not as a means of assimilating and becoming white but rather as a way of defending immigrant difference as distinct from race rooted in culture rather than body and blood eventually hattam shows the immigration and naturalization service and the census bureau institutionalized this distinction by classifying latinos as an ethnic group and not a race but immigration and the resulting population shifts of the last half century have created a political opening for reimagining the relationship between immigration and race how to do so is the question at hand in the shadow of race concludes by examining the recent new york and los angeles elections and the 2006 immigrant rallies across the country to assess the possibilities of forging a more robust alliance between immigrants and african americans such an alliance is needed hattam argues to more effectively redress the persistent inequalities in american life
