famed mathematician alexander grothendieck in his resume set forth his plan for the study of the finer structure of banach spaces he used tensor products as a foundation upon which he built the classes of operators most important to the study of banach spaces and established the importance of the local theory in the

study of these operators and the spaces they act upon when lintenstrauss and pelczynski addressed his work at the rebirth of banach space theory they shed his fundamental inequality in the trappings of operator ideals by shedding the tensorial formulation the authors of this book however feel that there is much of value in grothendieck's original formulations in the resume and here endeavor to expose the resume by presenting most of grothendieck's arguments using the mathematical tools that were available to him at the time
