the cambridge workshops on universal access and assistive technology cwuaat is one of the few  
 gatherings where people interested in inclusive design across different fields including designers  
 computer scientists engineers architects ergonomists ethnographers policymakers and user  
 communities meet discuss and collaborate cwuaat has also become an international workshop  
 representing diverse cultures including portugal germany trinidad and tobago canada australia china  
 norway usa belgium uk and many more the workshop has five main themes based on barriers  
 identified in the developing field of design for inclusion i breaking down barriers between disciplines  
 ii breaking down barriers between users designers and developers iii removing barriers to usability  
 accessibility and inclusive design iv breaking down barriers between people with impairments and  
 those without v breaking down barriers between research and policy making in the context of  
 developing demographic changes leading to greater numbers of older people and people living with  
 impairments the general field of inclusive design research strives to relate the capabilities of the  
 population to the design of products services and spaces cwuaat has always had a successful  
 multidisciplinary focus but if genuine transdisciplinary fields are to evolve from this the final barriers  
 to integrated research must be identified and characterised only then will benefits be realised in an  
 inclusive society barriers do not arise from impairments themselves but instead are erected by  
 humans who often have not considered a greater variation in sensory cognitive and physical user  
 capabilities barriers are not only technical or architectural but they also exist between different  
 communities of professionals our continual goal with the cwuaat workshop series is to break down  
 barriers in technical physical and architectural design as well as barriers between different  
 professional communities
