authored by renowned experts in the field of chemistry education this book provides a holistic approach to cover all issues related to learning and teaching in the chemistry laboratory

the interdisciplinary future of engineering education discusses the current state of

engineering education and addresses the daily challenges of those working in this sector the topics of how to do a better job of teaching a specific audience how to facilitate learning and how to prepare students for their future careers are extensively covered and innovative solutions are proposed throughout this unique book brings together a breadth of expertise attested by the broad backgrounds of the experts and educational practitioners contributing to this volume to lay the foundations for the future direction with the improvement of education of engineers in mind this collaborative effort by a group of uniquely placed educational practitioners provides guidance on the status of current engineering education and lays the foundations for its future direction the reasons why we teach what we teach how we teach when we teach where we teach and who teaches are all re examined in a new light and ideas and solutions are proposed and evidentially supported the book sets out ideas for the need to develop a systemic and interdisciplinary approach to the education of future engineers on a model of student based learning this book will be of great interest to academics and educational researchers in the fields of engineering education and higher education it will also appeal to higher education policymakers educators and university teachers

this book explores evidence based practice in college science teaching it is grounded in disciplinary education research by practicing scientists who have chosen to take wieman s 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching in editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities in keeping with wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences the content is structured as follows after an introduction based on constructivist learning theory section i the practices we explore are eliciting ideas and encouraging reflection section ii using clickers to engage students section iii supporting peer interaction through small group activities section iv restructuring curriculum and instruction section v rethinking the physical environment section vi enhancing

understanding with technology section vii and assessing understanding section viii the book's final section ix is devoted to professional issues facing college and university faculty who choose to adopt active learning in their courses the common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years in this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base for most students that knowledge base is riddled with a host of naïve notions misconceptions and alternative conceptions they have acquired throughout their lives to a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances clearly this prescription demands far more than most college and university scientists have been prepared for
