language fundamentally defines and distinguishes us as humans as members of society and as individuals as we go through life our relationship with language and with learning shifts and changes but it remains significant this book is an up to date resource for graduate students and researchers in second language l2 acquisition who are interested in language learning across the lifespan the main goal is to survey and evaluate what is known about the linguistic cognition affect associations that occur in l2 learning from birth through senescence passing through the stages of childhood adolescence adulthood and third age the

extent to which L2 acquisition may be seen as contributing to healthy and active aging the impact of the development of personalized technology enhanced communicative L2 environments and how these phenomena are to be approached scientifically and methodologically the effects of certain specific variables such as gender socio economic background and bilingualism are also analyzed as we argue that chronological age does not determine the positioning of L2 learners across the lifespan age is part of a complex web of social distinctions such as psychological and individual factors that intersect in the construction of a learner's relative status and opportunities

current while maintaining the essence of its previous editions

understanding reading abilities and their development is fundamental for language comprehension and human cognition now in its second edition this book draws on research from multiple disciplines to explain reading abilities in both L1 and L2 and shows how this research can be applied in practice in order to support reading development research into reading has progressed a great deal since the first edition was published so this edition has been completely updated and revised in order to reflect these advances all chapters present updated research studies and completely new chapters are included on the neurocognition of reading reading writing relationships and digital reading if you want to know how reading works no matter the language s involved as well as how it can be taught effectively this book provides a persuasive research foundation and many practical insights it is essential reading for academic researchers and students in applied linguistics and TESOL

research on brain asymmetry with particular emphasis on findings made possible by recent advances in neuroimaging

emotion can impact various aspects of our cognition and behavior by enhancing or impairing them e g enhanced attention to and memory for emotional events or increased distraction produced by goal irrelevant emotional information on the other hand emotion processing is also susceptible to cognitive influences typically exerted in the form of cognitive control of motion or emotion regulation despite important recent progress in understanding emotion cognition interactions a number of aspects remain unclear the present book comprises a collection of manuscripts discussing emerging evidence regarding the mechanisms underlying emotion cognition interactions in healthy functioning and alterations associated with clinical conditions in which such interactions are dysfunctional initiated with a more

restricted focus targeting 1 identification and in depth analysis of the circumstances in which emotion enhances or impairs cognition and 2 identification of the role of individual differences in these effects our book has emerged into a comprehensive collection of outstanding contributions investigating emotion cognition interactions based on approaches spanning from behavioral and lesion to pharmacological and brain imaging and including empirical theoretical and review papers alike co hosted by the frontiers in neuroscience integrative neuroscience and frontiers in psychology emotion science the contributions comprising our book and the associated research topic are grouped around the following seven main themes distributed across the two hosting journals i emotion and selectivity in attention and memory ii the impact of emotional distraction linking enhancing and impairing effects of emotion iii what really is the role of the amygdala iv age differences in emotion processing the role of emotional valence v affective face processing social cognition and personality neuroscience vi stress mood emotion and the prefrontal cortex the role of control in the stress response vii emotion cognition interactions in clinical conditions as illustrated by the present collection of contributions emotion cognition interactions can be identified at different levels of processing from perception and attention to long term memory decision making processes and social cognition and behavior notably these effects are subject to individual differences that may affect the way we perceive experience and remember emotional experiences or cope with emotionally challenging situations moreover these opposing effects tend to co occur in affective disorders such as depression and ptsd where uncontrolled recollection of and rumination on distressing memories also lead to impaired cognition due to emotional distraction understanding the nature and neural mechanisms of these effects is critical as their exacerbation and co occurrence in clinical conditions lead to devastating effects and debilitation hence bringing together such diverse contributions has

allowed not only an integrative understanding of the current extant evidence but also identification of emerging directions and concrete venues for future investigations

the human brain as described by crick is nothing more than a complex network of neurons a statement which is as reductive as it is fascinating there has been a growing interest in neuroscience in relation to education schools are eager to understand how the brain functions to improve teaching and learning the central challenge for educational neuroscience lies in using brain research to inform educational practices and understand the cognitive processes behind learning imaging has opened up new research territories including brain exploration learning appears in fact to occur primarily through changes in the strength and number of connections between existing neurons a process called synaptic plasticity neural pathways learning and new knowledge are optimized when ideas are considered from a multidimensional approach
