space time relativity and cosmology provides a historical introduction to modern relativistic cosmology and traces its historical roots and evolution from antiquity to einstein the topics are presented in a non mathematical manner with the emphasis on the ideas that underlie each theory rather than their detailed quantitative consequences a significant part of the book focuses on the special and general theories of relativity the tests and experimental evidence supporting the theories are explained together with their predictions and their confirmation other topics include a discussion of modern relativistic cosmology the consequences of hubble s observations leading to the big bang hypothesis and an overview of the most exciting research topics in relativistic cosmology this textbook is intended for introductory undergraduate courses on the foundations of modern physics it is also accessible to advanced high

school students as well as non science majors who are concerned with science issues

describing einstein s work is not easy for such a diverse subject difficult is misleading for it depends as much on the recipient as on the content yet based on selective impressions relativity has a daunting reputation which deters many and has gone unquestioned for years this book takes a critical look at that image and by ignoring the practical needs of professionals places relativity in a very different perspective harder parts are less common but often matter least for general purposes no knowledge of mathematics at all is necessary to fully understand what relativity says and means contrary to popular belief and on that basis understanding einstein should be within the grasp of every student interested to try and with the motivation to succeed to achieve this aim an approach has been adopted which places emphasis on meaning over content with the ultimate objective that understanding is what matters most rather than provision of facts and information the book is aimed at a very wide range of potential readers from complete novice to university level with format and content material adapted accordingly the general layout is modular with topics classified under three categories of difficulty to meet different levels of interest and aptitude and these grades are identified in the contents section preceding each chapter readers can thus customise their choice of reading while cross referencing and frequent summaries facilitate moving between levels little mathematics is included in the text and can all be skipped but for advanced readers a very full selection of equations most with derivations from first principles has been included in a series of appendices which follow each chapter an unusual feature is a chapter on cosmology for those who wish to follow the logical consequences of general relativity there is a very extensive glossary

as the magazine of the texas exes the alcalde has united alumni and friends of the university of texas at austin for nearly 100 years the alcalde serves as an intellectual crossroads where ut s luminaries artists engineers executives musicians attorneys journalists lawmakers and professors among them meet bimonthly to exchange ideas its pages also offer a place for texas exes to swap stories and share memories of austin and their alma mater the magazine s unique name is spanish for mayor or chief magistrate the nickname of the governor who signed ut into existence was the old alcalde

science is central to our modern technological society yet many of the most able pupils who could become the scientists of tomorrow turn away from science as soon as they have a choice in their studies science is often seen to be difficult or boring and fails to engage or challenge those who are most suited to excel in scientific studies this book asks what classroom teachers can do to make sure that their science teaching is stimulating and challenging for their students topics covered include what do we mean by gifted and able children gifted children that slip through the net challenging science through modelling asking questions in science exploring topical issues challenging science through talk after school enrichment set in the wider context of debates about the provision for those labelled gifted and exceptionally able this book explores the meaning of these categories and considers what they may imply in such approaches as setting streaming acceleration and

enrichment

the unifying theme of this text is the development of the skills necessary for solving equations and inequalities followed by the application of those skills to solving applied problems every section ending in the text begins with six simple writing exercises these exercises are designed to get students to review the definitions and rules of the section before doing more traditional exercises
