this book aims to present a picture of one of the world's leading credit rating agencies credited as being the first credit rating agency moody's stands as the epitome of the rating sector and all that it effects however outside of internal and non public histories compiled within the rating agency itself the story of moody's has never been told until now however this is not a historical book rather this book paints a picture of moody's on a wider canvas that introduces the concept of rating to you taking into account the origins of the sector the competitive battles that formed the modern day oligopoly and the characters that have each taken their turn on sculpting the industry that today is critical to the modern economy the book is a story of personable people who provided the market with what it needed but it is more than that it is a story of conflict impact strategy and most of all the relationship between big business and modern society standing as the gatekeeper to the capital markets that form the core of modern society moody's represents the very best of what the marketplace can produce but also the very worst this story takes in economic crises in the antebellum us the panics of the early 1900s the wall street crash and the great depression and of course the global financial crisis it does this because at the heart of each one was a member of the rating industry or the reporting industry that preceded it associated with almost any financial scandal you may care to remember the credit rating agencies in their often uncomfortable role as gatekeepers have their fingerprints on most financial scandals and calamities this book tells the story of the industry's founding member

a valuable overview and analysis of foundational concepts in animal behaviour studies including information meaning communication signals and cues its comprehensive introduction and numerous illustrations will make it accessible to students and researchers from a wide variety of academic backgrounds ranging from ethology and evolutionary biology to philosophy of mind

each issue of transactions b is devoted to a specific area of the biological sciences including clinical science all papers are peer reviewed and edited to the highest standards published on the 29th of each month transactions b is essential reading for all biologists

why are animal signals reliable this is the central problem for evolutionary biologists interested in signals of course not all signals are reliable but most are otherwise receivers of signals would ignore them a number of theoretical answers have been proposed and empirical

studies made but there still remains a considerable amount of confusion the authors one a theoretician the other a fieldworker introduce a sense of order to this chaos a significant cause of confusion has been the tendency for different researchers to use either the same term with different meanings or different terms with the same meaning the authors attempt to clarify these differences a second cause of confusion has arisen because many biologists continue to assume that there is only one correct explanation for signal reliability the authors argue that the reliability of signals is maintained in several ways relevant in different circumstances and that biologists must learn to distinguish between them in this book they explain the different theories give examples of signalling systems to which one or another theory applies and point to the many areas where further work both theoretical and empirical is required
