**Delving into the Core Concepts**

- 1 The Basics Arrays and Linked Lists
- 2 Arrays are like neat rows of numbered boxes where you can store data elements Simple yet powerful Linked lists on the other hand are more flexible allowing you to add or remove elements dynamically
- 2 Stacking Up and Queuing Up Stacks and queues are like real-life structures Imagine a stack of plates you add new plates at the top and remove them from the top Queues are like waiting lines you add new elements at the back and remove them from the front
- 3 Searching and Sorting Finding the right data and organizing it efficiently are critical tasks You'll explore different search techniques like linear search and binary search as well as sorting algorithms like bubble sort and merge sort
- 4 Trees and Graphs Navigating Complex Data Trees and graphs are used to represent complex relationships between data Think of a family tree or a social network these

relationships can be visualized and explored through these data structures

### 5 Hashing The Key to Efficient Lookups

Hashing is a powerful technique that allows you to quickly find data. Imagine having a key for every piece of information; this makes retrieval much faster.
