james d watson when in late march of 1953 francis crick and i came to write the first nature paper describing the double helical structure of the dna molecule francis had wanted to include a lengthy discussion of the genetic implications of a molecule whose structure we had divined from a minimum of experimental data and on theoretical arguments based on physical principles but i felt that this might be tempting fate given that we had not yet seen the detailed evidence from king's college nevertheless we reached a compromise and decided to include a sentence that pointed to the biological significance of the molecule's key feature the complementary pairing of the bases it has not escaped our notice francis wrote that the specific pairing that we have postulated immediately suggests a possible copying mechanism for the genetic material by may when we were writing the second nature paper i was more confident that the proposed structure was at the very least substantially correct so that this second paper contains a discussion of molecular self duplication using templates or molds we pointed out that as a consequence of base pairing a dna molecule has two chains that are complementary to each other each chain could then act as a template for the formation on itself of a new companion chain so that eventually we shall have two pairs of chains where we only had one before and moreover
