stepbystep approach 1 Attempt the Question Independently Always try to solve the problem yourself first This helps you identify your strengths and weaknesses 2 Review Your Working Check your working carefully for errors in calculation logic or method 3 Compare Your Answer Only then compare your answer with the provided solution Dont just look at the final answer examine the entire working 4 Analyze Discrepancies If your answer differs identify where the error occurred Understanding the mistake is far more valuable than just getting the right answer 5 Seek Clarification If youre still struggling consult your textbook teacher or tutor for further explanation

IV Example Solving a Quadratic Equation Lets consider a typical GCSE question Solve the quadratic equation  $x^2 - 5x + 6 = 0$  Student Attempt The student might attempt to factorize but incorrectly get  $x^2 - 3x + 0$  leading to  $x^2$  and  $x^3$  This is the correct factorization Answer Comparison Comparing this with the correct solution which would show the factorization and the solutions  $x^2$  and  $x^3$  the student sees their attempt was correct Learning Point Even if the answer is correct reviewing the working confirms understanding of the factorization method If the student had made an error in factorization they would identify the mistake and learn from it
