human behavior is of fundamental importance not only to the individual but to the community and all of humanity now that humans have acquired the capability of interfering with or destroying living systems it is of great consequence to the planet itself with this in mind the book understanding human

behavior theories patterns and developments is the result of inviting several leading innovative thinkers to consider how they could contribute to a discussion of understanding human behavior their perspectives differ in approach and focus but they all confirm the great complexity of the topic and they show that science has hardly scratched its surface the eight chapters of this volume are dominated by considerations of how the behavior of humans began and developed in the distant past during the evolution of early humans in human sociology the term behavior refers to the range of physical action reaction and observable emotion associated with individuals today as well as human society as a whole but this describes only effects or symptoms of a condition pertaining to today without considering how it came about i e its original causes this is examined in several chapters of this book together with apparent historical trajectories of human behavior in an attempt to explore its etiology other contributions investigate more specific aspects of human behavior including those recorded in history and even in modern times in summary this volume provides a well rounded investigation into current cutting edge understanding of the origins and nature of human behavior

we do not move unless we are bothered the most brilliant discovery in human nature every single human motion relates to a bothersome we remain immobile if nothing bothers us imagine sitting on the sofa in your living room completely comfortable with nothing at all to bother you you are not hungry thirsty or tired you are not cold hot or sick the telephone does not ring you are not worried about bills coming due or your job or business you are not bored or sleepy and absolutely nothing makes you uncomfortable worried excited or upset you are continuously calm and comfortable sitting on that sofa would you make any movement if nothing bothered you what would be the first motion of our bodies if nothing bothered us our actions depend on our balance we perform motions only when we lose our balance and we remain immobile when we are in balance when you see a beggar you lose your balance comfort and you give him or her a dollar to regain your balance someone gives you a flower and you say thank you to regain your balance how would you feel if you didn't say thank you when someone gave you a flower you would feel uncomfortable and imbalanced what happens in our minds when we initiate motions we perform motions based on the potential outcomes of our joy and suffering our brains constantly evaluate joy and suffering and we act where there is more enjoyment and less suffering in other words the sum of the outcome of our wants and fears determines our emotions problems create imbalances and wants in us we perform motions to regain our balance suffering and joy are associated with each motion and that's

how life begins and continues life is nothing but the repetition of suffering and joy if we eliminate problems from our lives we eliminate joy and happiness as well experiments prove that actions and reactions are chemical not psychological feelings constitute a certain chemical process in the brain and there is nothing beyond our bodies such as emotions depression anxiety mania and other so called mental disorders result from a chemical imbalance so what does that say about human nature behaviorology a revolutionary new branch of science analyzing human behavior suggests that the potential outcome of our wants and fears determines our motions and there is nothing external rafii lays out seven rules of human behavior 1 we always want to be comfortable balanced 2 we move only when we lose our balance 3 loss of balance always creates want in us 4 every motion is associated with suffering and joy 5 more suffering leads to more joy 6 the outcome of want and fear determines motion 7 personality physicality and mental and environmental conditions determine desires and fears and we move based on the sum of the outcomes of those desires and fears the above discoveries opened a new window into the world of psychology this book is an advanced powerful tool for analyzing human behavior

the psychology classic a detailed study of scientific theories of human nature and the possible ways in which human behavior can be predicted and controlled from one of the most influential behaviorists of the twentieth century and the author of walden two this is an important book exceptionally well written and logically consistent with the basic premise of the unitary nature of science many students of society and culture would take violent issue with most of the things that skinner has to say but even those who disagree most will find this a stimulating book samuel m strong the american journal of sociology this is a remarkable book remarkable in that it presents a strong consistent and all but exhaustive case for a natural science of human behavior it ought to be valuable for those whose

preferences lie with as well as those whose preferences stand against a behavioristic approach to human activity harry prosch ethics

how scientific studies of human behavior can be replicated with the consistency and rigor characteristic of the physical sciences yielding scientific laws in laws of human behavior donald pfaff and sandra sherman argue that many behavioral and neural discoveries verified over the years through precise reliable measurement are tantamount to laws comparable in rigor and replicability to physical laws such as gravity and the second law of thermodynamics drawing on research in areas including psychophysics various types of conditioning and habit formation and even social behaviors they show how important aspects of the behavioral sciences contribute to laws that should be celebrated now responding to what some commentators have called a crisis in reliability the authors make a compelling case for the progress that experimental work in areas formerly labeled as soft science has achieved the book is international in scope references range from the early nineteenth century work of weber to papers published in 2023 in particular the authors cite important accomplishments in the behavioral and neural sciences of the past few decades that support the characterization of these sciences as exact each chapter of the book has three parts examples of the law s manifestations in everyday life examples of the laboratory science that supports the law and neurobiological results that further support the validity of the law the book also offers clues for understanding where the field of behavioral science is headed the authors intend for the book to be accessible to interested nonscientists

uses real life stories and personal examples to discuss nine aphorisms that describe and explain a large range of seemingly unusual behaviors

developed from the author s long teaching career how to rethink human behavior aims to cultivate practical skills in human observation and analysis rather than offer a catalogue of immutable facts it synthesizes key psychological concepts with insights from other disciplines including sociology social anthropology economics and history the skills detailed in the book will help readers to observe people in their contexts and to analyze what they observe in order to make better sense of why people do what they do say what they say and think what they think these methods can also be applied to our own thoughts talk and actions not as something we control from within but as events constantly being shaped by the idiosyncratic social cultural economic and other contexts in which our lives are immersed whether teaching studying or reading for pleasure this book will help readers learn how to think about people with

ecological or contextual thinking how your thinking is a conversation with other people how to analyze talk and conversations as social strategies how capitalist economies change how you act talk and think in 25 ways how living in modern society can be linked to generalized anxiety and depression how to rethink human behavior is important interdisciplinary reading for students and researchers in all fields of social science and will especially appeal to those interested in mental health it has also been written for the general reading public who enjoy exploring new ideas and skills in understanding themselves and other people
