this text is designed for a one year course in college physics that uses algebra and trigonometry the book has three goals to help students develop conceptual understanding of physical principles the ability to reason and problem solving skill to help students see that physics is a wonderfully integrated body of knowledge to

show students that physics principles come into play over and over again in their lives

the chapters contained in the book present a new and exciting set of conceptual tools that will not only allow us to think about transfer in more productive ways but will also enable the development of educational and measurement tools that will greatly facilitate our ability to educate the children in our schools this volume is eclectic in bringing together researchers from psychology and science education especially physics who would not normally present their ideas under the same forum to share their views and perspectives on transfer what we believe has emerged is a fresh look at transfer issues from a multidisciplinary perspective

physics education research is a young field with a strong tradition in many countries however it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of physics in contemporary society for different levels and populations this may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice on the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science communication science history and philosophy the topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning physics with some reflections on the physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments the issue of assessment and cultural aspects information is also given on the organizations involved in connecting various aspects of physics education the international commission on physics education the european physical society and the european physics education network
