introduction to modern mathematics focuses on the operations principles and methodologies involved in modern mathematics the monograph first tackles the algebra of sets natural numbers and functions discussions focus on groups of transformations composition of functions an axiomatic approach to natural numbers intersection of sets axioms of the algebra of sets fields of sets propositional functions of one variable and difference of sets the text then takes a look at generalized unions and intersections of sets cartesian products of sets and equivalence relations the book ponders on powers of sets ordered sets and linearly ordered sets topics include isomorphism of linearly ordered sets dense linear ordering maximal and minimal elements quasi ordering relations inequalities for cardinal numbers sets of the power of the continuum and cantor s theorem the manuscript then examines elementary concepts of abstract algebras functional calculus and its applications in mathematical proofs and propositional calculus and its applications in mathematical proofs the publication is a valuable reference for mathematicians and researchers interested in modern mathematics

excursions in modern mathematics introduces non math majors to the power of math by exploring applications like social choice and management science showing that math is more than a set of formulas ideal for an applied liberal arts math course tannenbaum's text is known for its clear accessible writing style and its unique exercise sets that build in complexity from basic to more challenging the eighth edition offers more real data and applications to connect with today's students expanded coverage of applications like growth and revised exercise sets mymathlab exercise sets are expanded and the new ready to go mymathlab course makes course set up even easier

ulam famous for his solution to the difficulties of initiating fusion in the hydrogen bomb devised the well known monte carlo method here he presents challenges in the areas of set theory algebra metric and topological spaces and topological groups issues in analysis physical systems and the use of computers as a heuristic aid are also addressed

examinations of arithmetic geometry and theory of integers rational and natural numbers complete induction limit and point of accumulation remarkable curves complex and hypercomplex numbers more includes 27 figures 1959 edition

whether you are stumped by the commutative law in algebra or a whiz at multiplying three digit numbers in your head this book opens the door to the wonders of mathematical imagining by using simple language and intriguing illustrations drawn by her husband hugh lillian lieber presents subtle mathematical concepts in an easy to understand way over sixty years after its release this whimsical exploration of how to think in a mathematical mood will continue to delight math lovers of all ages barry mazur's new introduction is a tribute to the liebers influence on generations of mathematicians

the international new math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century it attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations after garnering much initial support it began to attract criticism but as bill jacob and the late jerry becker show in chapter 17 some of the effects became entrenched this volume edited by professor dirk de bock of belgium provides an outstanding overview of the new math modern mathematics movement chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations the first few chapters show how the initial leadership came from mathematicians in european nations and in the united states of america the background leaders in europe were caleb gattegno and members of a mysterious group of mainly french pure mathematicians who since the 1930s had published under the name of a fictitious nicolas bourbaki in the united states there emerged during the 1950s various attempts to improve u.s. mathematics curricula and teaching especially in secondary schools and colleges this side of the story climaxed in 1957 when the soviet union succeeded in launching sputnik the first satellite undoubtedly this is a landmark publication in education the foreword was written by professor bob moon one of a few other scholars to have written on the new math from an international perspective the final epilogue chapter by professor geert vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends

the second in this two volume series also contains original papers commissioned from many of the most prominent and accomplished mathematicians of the 20th century a three part treatment covers mathematical methods statistical and scheduling studies and physical phenomena contributors include william feller stanislaw m ulam and george pólya 1961 edition

in this book international expert authors provide solutions for modern fundamental problems including the complexity of computing of critical points for set valued mappings the behaviour of solutions of ordinary differential equations partial differential equations and difference equations or the development of an abstract theory of global attractors for multi valued impulsive dynamical systems these abstract mathematical approaches are applied to problem solving in solid mechanics hydro and aerodynamics optimization decision making theory and control theory this volume is therefore relevant to mathematicians as well as engineers working at the interface of these fields

this small book demonstrates the evolution of certain areas of modern mathematics by examining the work of past winners of the fields medal the nobel prize of mathematics foreword by freeman dyson
