this book focuses on the state of the art developments in machining with nanomaterials numerous in depth case studies illustrate the practical use of nanomaterials in industry including how thin film nanostructures can be applied to solving machining problems and how coatings can improve tool life and reduce machining costs in an environmentally acceptable way chapters include discussions on among other things comparisons of re coated cutting tools and re ground drills the modeling and machining of medical materials particularly implants for optimum biocompatibility including corrosion resistance bio adhesiveness and elasticity recent developments in machining difficult to cut materials as well as machining brittle materials using nanostructured diamond tools spindle speed variation ssv for machining chatter suppression nano grinding with abrasives to produce micro and nano fluidic devices the importance of proper design of cutting tools including milling tools single point turning tools and micro cutting tools is reinforced throughout the book this is an ideal book for engineers in industry practitioners students teachers and researchers

in many machining operations burrs cannot be avoided they can affect the functionality and the safe handling of the workpiece in the subsequent processing and have to be removed by a special deburring process toleration of burrs which are not part of functional edges depends on their respective shape and size high inspection effort is necessary to guarantee the workpiece quality therefore

the research results on burrs with a focus on burr analysis and control as well as on cleanability and burr removal based on the presentations held at the conference are valuable for researchers and engineers in manufacturing development
