this volume contains a collection of research articles on multivariate statistical methods encompassing both theoretical advances and emerging applications in a variety of scientific disciplines it serves as a tribute to professor s n roy an eminent statistician who has made seminal contributions to the area of multivariate statistical methods on his birth centenary in the area of emerging applications the topics include bioinformatics categorical data and clinical trials econometrics longitudinal data analysis microarray data analysis sample surveys statistical process control etc researchers professionals and advanced graduates will find the book an essential resource for modern developments in theory as well as for innovative and emerging important applications in the area of multivariate statistical methods

about the turn of the century the apicomplexa plus some other groups were called sporozoa with the advent of the electron microscope it was realized that most sporozoa have an apical complex those which do not the microspora myxozoa and ascetospora were removed and the name apicomplexa was put forward by dr levine in 1970 most of the important apicomplexa fall into five main groups the gregarines haemogregarines about which there is relatively little known coccidia haemosporids and piroplasms these two volumes classify list with synonyms and hosts and give references to descriptions of the approximately 4600 species of apicomplexa that have been named so far

volume i contains an 8 page introduction and covers the gregarines and coccidia including the haemogregarines in volume ii are the sarcocystidae the predator prey coccidia the haemosporids the malaria and related parasites the piroplasms and some parasites of uncertain affinities the apicomplexa are divided into over 300 genera and more than 60 families but this division is deceiving most of these groups contain only one or a few species there are fewer than 50 genera with 10 or more named species and only 8 with 100 or more these 8 genera eimeria haemogregarina gregarina isospora haemoproteus plasmodium sarcocystis and babesia comprise more than half of the species

change is one of the most significant parameters in our society designers are amongst the primary change agents for any society as a consequence design is an important research topic in engineering and architecture and related disciplines since design is not only a means of change but is also one of the keystones to economic competitiveness and the fundamental precursor to manufacturing the development of computational models founded on the artificial intelligence paradigm has provided an impetus for much of current design research both computational and cognitive these forms of design research have only been carried out in the last decade or so and in the temporal sense they are still immature notwithstanding this immaturity noticeable advances have been made both in extending our understanding of design and in developing tools based on that understanding whilst many researchers in the field of artificial intelligence in design utilise ideas about how humans design as one source of concepts there is normally no attempt to model human designers rather the results of the research presented in this volume demonstrate approaches to increasing our understanding of design as a process
