why our economy is cheating the future and what we can do about it the world s leading economies are facing not just one but many crises the financial meltdown may not be over climate change threatens major global disruption economic inequality has reached extremes not seen for a century and government and business are widely distrusted at the same time many people regret the consumerism and social corrosion of modern life what these crises have in common diane coyle argues is a reckless disregard for the

future especially in the way the economy is run how can we achieve the financial growth we need today without sacrificing a decent future for our children our societies and our planet how can we realize what coyle calls the economics of enough running the economy for tomorrow as well as today will require a wide range of policy changes the top priority must be ensuring that we get a true picture of long term economic prospects with the development of official statistics on national wealth in its broadest sense including natural and human resources saving and investment will need to be encouraged over current consumption above all governments will need to engage citizens in a process of debate about the difficult choices that lie ahead and rebuild a shared commitment to the future of our societies creating a sustainable economy having enough to be happy without cheating the future won t be easy but the economics of enough starts a profoundly important conversation about how we can begin and the first steps we need to take
