the focus of semiconductor wafer processing is rapidly changing pure device performance is no longer sufficient to ensure a

technology's success as IC chips approach 1Gb yield, reliability, cost and manufacturability are principal drivers of the industry. Great strides have been made in understanding the science and impact of front-end pre-metal chemical surface preparations and are beginning to influence the real technology and its evolution. Efforts in understanding particle and metals removal along with Si surface etching and microroughness are prime examples of areas where work is beginning to pay off together with processes related to the back-end post-metal. The focus of this book is to report new findings and to discuss surface preparation with an emphasis on gaining a mechanistic understanding of the underlying science upon which the technology is based. Topics include megasonic cleaning, SC1 technology, surface preparation and gate oxide reliability, CMP, CMP cleaning, post-etch processing, surface microroughness, wet chemical cleaning and gate oxide integrity, analytical studies of surfaces, wet chemical cleaning, etching, dry wafer cleaning and environmentally friendly processing.
