by modern analytic mechanics we mean the classical mechanics of today that is the mechanics that has proven particularly useful in understanding the universe as we experience it from the solar system to particle accelerators to rocket motion the mathematical and numerical techniques that are part of this mechanics that we present are those that we have found to be particularly productive in our work in the subject the balance of topics in this book is somewhat different from previous texts we emphasize the use of phase space to describe the dynamics of a system and to have a qualitative understanding of nonlinear systems we incorporate exercises that are to be done using a computer to solve linear and nonlinear problems and to have a graphical representation of the results while analytic solutions of physics problems are to be preferred it is not always possible to find them for all problems when that happens techniques other than analysis must be brought to bear on the problem in many cases numerical treatments are useful in generating solutions and with these solutions often come new insights these

insights can sometimes be used for making further analytic progress and often the process is iterative thus the ability to use a computer to solve problems is one of the tools of the modern physicist just as analytic problem solving enhances the student's understanding of physics so will using the computer enhance his or her appreciation of the subject

human error plays a significant role in many accidents involving safety critical systems and it is now a standard requirement in both the us and europe for human factors hf to be taken into account in system design and safety assessment this book will be an essential guide for anyone who uses hf in their everyday work providing them with consistent and ready to use procedures and methods that can be applied to real life problems the first part of the book looks at the theoretical framework methods and techniques that the engineer or safety analyst needs to use when working on a hf related project the second part presents four case studies that show the reader how the above framework and guidelines work in practice the case studies are based on real life projects carried out by the author for a major european railway system and in collaboration with international companies such as the international civil aviation organisation volvo daimler chrysler and fiat
