oscillatory brain activities reflect and affect network activities in the brain they support many physiological functions from motor control to cognition and emotion abnormal oscillatory brain activities are commonly observed in neurological and psychiatric disorders including epilepsy parkinson s disease alzheimer s disease schizophrenia anxiety trauma related disorders major depressive disorders addiction etc therefore these disorders can be considered as common oscillation defects oscillopathies despite having distinct behavioral manifestations recent advances in brain activity measurements and analyses have allowed us to study the pathological oscillations of each disorder as a possible biomarker of symptoms furthermore novel brain stimulation technologies will enable time and space targeted interventions of the pathological oscillations of both neurological and psychiatric disorders as possible therapeutic targets for regulating their symptoms this research topic focused on understanding and controlling pathological oscillations in the brain will provide a comprehensive overview of pathological oscillations in neurological and psychiatric disorders this research topic will also examine correlations or causal relationships between pathological oscillations and the symptoms of disorders with a view to the possible use of oscillations as biomarkers or therapeutic targets good animal models that accurately reflect neurological and psychiatric symptoms of patients are necessary for providing the proof of concept toward future translational research large scale recording and reliable decoding technologies are crucial for discovering the correlations between pathological oscillations and some symptoms while time

and space targeted intervention technologies are necessary for studying their causal relationships such data will eventually allow the development of neuroprosthesis devices for pathological oscillations revealing the mechanisms of physiological oscillations is also important for the direction of this topic
