radionics is an extraordinary technique of energy balancing that was born at the beginning of 900 and now has operators all over the world the great english pioneer george de la warr defined it the science that studies the action of mind on matter and the union of all things one of its peculiarities is in fact the possibility to operate at a distance by means of the radiesthetic faculty and with specific instruments the radionic operator can analyze and intervene on any system living or not living that is near him as well as on the other side of the world although this may seem absurd the new discoveries of physics confirm that at certain levels there is no separation and we are one as claimed by the ancient knowledge radionics demonstrates this daily to thousands of people around the world who use it to send or receive treatment to carry out its action radionics uses pendulums graphs symbols shapes instruments of many types although it uses in some cases electronic instruments it has nothing to do with this science in fact it operates

exclusively at those pre physical levels which subtend matter the fields of action of radionics are many in reality there is no sector on which it is not possible to intervene positively with this very special technique precious for the health and the future of man and of the whole planet this text offers the reader the basis for making the most of this wonderful and fascinating branch of human knowledge

radionics is defined as a method of diagnosis and therapy which is primarily concerned with the utilization of subtle force fields and energies for the purpose of investigating and combating the causes of disease which ravage humanity and the other kingdoms of nature but in examining the history and development of radionics from the pioneering work of dr albert abrams and ruth drown to the latest experimental work at the de la warr laboratories david tansley discovered a curious paradox in literature on the subject and in the rate books which provide the very core of radionic therapeutic measures there are plenty of references to man s physical organic systems but little regarding the probability of underlying force fields which might govern and determine the health of the physical form this book represents an informed endeavour to redress the balance by providing a simple yet practical outline of the subtle anatomy of man the theory is not new abrams diagnosed at a distance and drown treated absent patients david tansley believes that the time is ripe for radionics to bear witness to an energy field of a more subtle nature that is in fact its innate purpose

this book explores the interface that exists between the human energy field and the universal field of energy in which we live it shows how these fields can be utilised for distant diagnosis and treatment it also illustrates that the surest and most effective way to ameliorate a defect in any biological system is to modulate the interacting and interdependent energy fields by way of the chakras the same energy fields can be used to take photographs of distant objects particularly the energy structures of living human tissues and pathological states existing in them the vibratory patterns and potencies of homoeopathic remedies can also be drawn from the ether fields and impregnated into neutral substances such as water or alcohol solutions which have a capacity for memory radionics is a healing art that links the physical world with the unseen worlds lying beyond the physical senses diagnostically it probes to the levels of

causation of disease therapeutically it is gentle and non invasive
