this book illustrates numerical simulation of fluid power systems by lms amesim platform covering hydrostatic transmissions electro hydraulic servo valves hydraulic servomechanisms for aerospace engineering speed governors for power machines fuel injection systems and automotive servo systems it includes hydrostatic transmissions automotive fuel injection hydropower speed units governor aerospace servo systems along with case studies of specified companies aids in predicting and optimizing the static and dynamic performances related to the systems under study

pipeline systems range from very simple ones to very large and quite complex ones they may be as uncomplicated as a single pipe

conveying water from one reservoir to another or they may be as elaborate as an interconnected set of water distribution networks for a major metropolitan area individual pipelines may contain any of several kinds of pumps at one end or an interior point they may deliver water to or from storage tanks so how do these systems work what principles are involved and how are the systems successfully analyzed and understood you can find the answers in this book by reading it you will be able to solve problems relating to flow through pipelines flow between reservoirs and the estimation of pipe friction factors this guide will give you the basic theory and illustrate it through worked examples you can then further cement that understanding by working through a series of self study questions by the end you can apply the continuity equation energy bernoulli equation and the equations for estimating energy loss such as darcy weisbach and colebrook white equations to solve a wide variety of engineering problems

the 2023 2nd international conference on information economy data modeling and cloud computing icidc 2023 was therefore held during june 2nd to 4th 2023 in nanchang china hybrid form the conference was attended by more than 100 participants and hosted four keynote speeches more than 60 oral presentations as well as various poster presentations the proceedings of icidc 2023 cover various topics including big data finance e commerce and digital business modeling method 3d modeling internet of things cloud computing platform etc all the papers have been checked through rigorous review and processes to meet the requirements of publication data modeling allows us to obtain the dynamic change trend of various indicator data so how to use big data information to model and study the development trend of economic operation plan is of great significance and that is exactly the purpose of this conference focusing on the application of big data in the economic field as well as conducting more profound research in combination with cloud computing
