this volume contains the proceedings of the third international conference on non associative algebra and its applications held in oviedo spain july 12 17 1993 the conference brought together specialists from all over the world who work in this interesting and active field which is currently enjoying much attention all aspects of non associative algebra are covered topics range from purely mathematical subjects to a wide spectrum of applications and from state of the art articles to overview papers this collection will point the way for further research for many years to come the volume is of interest to researchers in mathematics as well as those whose work involves the application of non associative algebra in such areas as physics biology and genetics

the wei liang chow and kuo tsai chen memorial conference was proposed and held by prof s s chern in nankai institute of mathematics it was devoted to memorializing those two outstanding and original chinese mathematicians who had made significant contributions to algebraic geometry and algebraic topology respectively it also provided a forum for leading mathematicians to expound and discuss their views on new ideas in these fields as well as trends in 21st century mathematics about 100 mathematicians participated in the conference including sir michael atiyah jacob palis phillip griffiths david eisenbud philippe tondeur yujiro kawamata tian gang etc this invaluable volume contains the selected papers presented at the conference the topics include canonical maps of gorenstein 3 folds fundamental groups of algebraic curves chen s interated integrals algebraic fiber spaces and others

this is the second volume of the new subseries invariant theory and algebraic transformation groups the aim of the survey by a

bialynicki birula is to present the main trends and achievements of research in the theory of quotients by actions of algebraic groups this theory contains geometric invariant theory with various applications to problems of moduli theory the contribution by j carrell treats the subject of torus actions on algebraic varieties giving a detailed exposition of many of the cohomological results one obtains from having a torus action with fixed points many examples such as toric varieties and flag varieties are discussed in detail w m mcgovern studies the actions of a semisimple lie or algebraic group on its lie algebra via the adjoint action and on itself via conjugation his contribution focuses primarily on nilpotent orbits that have found the widest application to representation theory in the last thirty five years

this book is a general introduction to higher algebraic k groups of rings and algebraic varieties which were first defined by quillen at the beginning of the 70 s these k groups happen to be useful in many different fields including topology algebraic geometry algebra and number theory the goal of this volume is to provide graduate students teachers and researchers with basic definitions concepts and results and to give a sampling of current directions of research written by five specialists of different parts of the subject each set of lectures reflects the particular perspective ofits author as such this volume can serve as a primer if not as a technical basic textbook for mathematicians from many different fields of interest
