excerpt from our analytical chemistry and its future in an address read at philadelphia nearly twelve years ago i gave expression to some thoughts on the condition of analytical chemistry in our country as the condition appeared to me then to be those thoughts were based on an experience of many years during which i was engaged wholly in analytical work of a more than ordinarily exacting nature and especially upon observations that had been acquired in connection with several series of cooperative analyses of diverse materials since then my attention has been no less given to analysis largely for the past eight years in a supervisory capacity however and i have had opportunity to note the conditions that now prevail with respect to chemical analysis and what an important bearing exact analytical work often has on problems of physical and electrochemistry metallurgy etc it seems to me then that i can choose no more fitting subject for my present discourse than a continuation of one so closely related to my life work one in which i feel a deep interest and of which i may be presumed to have knowledge somewhat worth presenting on an occasion like this about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
