preface in recent years standard software has evolved from a tool for supporting commercial administrative activities e.g. financial accounting to integrated systems that cover entire business processes in companies the rapid development of these systems an increasing number of implementations and the suppliers announcements concerning the functional extension of their systems lead us to expect a further market penetration of standard software sap s industrial solutions for instance which are offered for the key processes of entire lines of business demonstrate the impressive success of standard software systems the widespread implementation of commercial standard software has required considerable investments by industrial and service companies now it is time to verify if the planned gains and advantages of these systems have actually been realised i.e. one has to ask whether the systems payoff as originally expected it has to be kept in mind that the vendors have promised far reaching optimisation of their clients business processes by means of the so called best practice reference processes implied by their systems the advantages of these best practices should have been incorporated in the processes

of the respective companies on closer inspection one can see that the claimed advantages of the systems capabilities in terms of optimised processes have not been realised in many of the current implementations studies and interviews undertaken with applying companies as part of the research for this book confirm this finding

research paper postgraduate from the year 2014 in the subject business economics supply production logistics language english abstract however challenging it may be in carrying out this research its findings are expected to give a contribution towards role based erp system implementation practice this study s findings are expected to be significant to various interested parties for example vendors may understand price and design based problems facing target customers and simplify applications to assist companies to implement role based erp systems with ease on the other hand people or companies implementing role based erp systems can also realize the internal and extraneous needs and get prepared effectively the trouble in implementing role based erp systems in industrialized nations may be worsened by the assertion that role based erp embodies proved ways of doing business thus requiring companies adopting role based erp systems to adjust their corporate processes to comply with business practices constitutional in role based erp packages vendors contend that the implementation of such best practices lowers the cost of configuring the software and results in improving the company s processes therefore gosain s 2004 says that companies and their stakeholders many times strain to implement such practices
