this timely handbook comprehensively explores the complex relationships between trade and economic performance in developing countries illustrating that it is not trade per se that is important but the context at the firm country and regional level in which trade occurs

against the backdrop of growing anti globalisation sentiments and increasing fragmentation of the production process across countries this book addresses how the indonesian economy should respond and how indonesia should shape its trade and industrial policies in this new world trade environment the book introduces evaluation not on tariffs but on new trade instruments such as non tariff measures sps tbt export measures and beyond border measures and looks at industrial policies from a broader perspective such as investment accessing inputs labour services research and innovation policies the open access version of this book available at taylorfrancis.com/books/10.4324/9781315161976 has been made available under a creative commons attribution non commercial no derivatives 4.0 license

the measurement infrastructure for the production of economic statistics in the united states largely was established in the middle part of the 20th century as has been noted by a number of commentators the data landscape has changed in fundamental ways since this infrastructure was developed obtaining survey responses has become increasingly difficult leading to increased data collection costs and raising concerns about the quality of the resulting data at the same time the

economy has become more complex and users are demanding ever more timely and granular data in this new environment there is increasing interest in alternative sources of data that might allow the economic statistics agencies to better address users demands for information recent years have seen a proliferation of natively digital data that have enormous potential for improving economic statistics these include item level transactional data on price and quantity from retail scanners or companies internal systems credit card records bank account records payroll records and insurance records compiled for private business purposes data automatically recorded by sensors or mobile devices and a growing variety of data that can be obtained from websites and social media platforms staggering volumes of digital information relevant to measuring and understanding the economy are generated each second by an increasing array of devices that monitor transactions and business processes as well as track the activities of workers and consumers incorporating these non designed big data sources into the economic measurement infrastructure holds the promise of allowing the statistical agencies to produce more accurate more timely and more disaggregated statistics with lower burden for data providers and perhaps even at lower cost for the statistical agencies the agencies already have begun to make use of novel data to augment traditional data sources modern data science methods for using big data have advanced sufficiently to make the more systematic incorporation of these data into official statistics feasible indeed the availability of new sources of data offers the opportunity to redesign the underlying architecture of official statistics considering the threats to the current measurement model arising from falling survey response rates increased survey costs and the growing difficulties of keeping pace with a rapidly changing economy fundamental changes in the architecture of the statistical system will be necessary to maintain the quality and utility of official statistics this volume presents cutting edge research on the deployment of big data to solve both existing and novel challenges in economic measurement the papers in this volume show that it is practical to incorporate big data into the production of economic statistics in real time and at scale they report on the application of machine learning methods to extract usable new information from large volumes of data they also lay out the challenges both technical and operational to using big data effectively in the production of economic statistics and suggest means of overcoming those challenges despite these challenges and the significant agenda for research and development they imply the papers in the volume point strongly toward more systematic and comprehensive incorporation of big data to improve official economic statistics in the coming years

after strong growth in 2017 and early 2018 global economic activity slowed notably in the second half of last year reflecting a confluence of factors affecting major economies china s growth declined following a combination of needed regulatory tightening to rein in shadow banking and an increase in trade tensions with the united states the euro area economy lost more momentum than expected as consumer and business confidence weakened and car production in germany was

disrupted by the introduction of new emission standards investment dropped in Italy as sovereign spreads widened and external demand especially from emerging Asia softened elsewhere natural disasters hurt activity in Japan trade tensions increasingly took a toll on business confidence and so financial market sentiment worsened with financial conditions tightening for vulnerable emerging markets in the spring of 2018 and then in advanced economies later in the year weighing on global demand conditions have eased in 2019 as the US Federal Reserve signaled a more accommodative monetary policy stance and markets became more optimistic about a US-China trade deal but they remain slightly more restrictive than in the fall

The book provides theoretical and empirical evidence on how world trade evolves how trade affects resource allocation how trade competition affects productivity how China shock affects world trade and how trade affects large and small countries it is a useful reference which focuses on new approaches to international trade by looking into country specific as well as firm product level specific cases the open access version of this book available at taylorfrancis.com/books/10.4324/9781351061544 has been made available under a Creative Commons Attribution Non-Commercial No Derivatives 4.0 license
