harry van der hulst's model of radical cv phonology has roots in the framework of dependency phonology but proposes a rather different geometry which reduces the set of unary elements to just two c and v the model explains the phonological distinctions that function contrastively in the world's languages rather than presenting it as a random list van der hulst shows how this model accounts for a number of central claims about markedness and minimal specification he explains how the representational system accounts for phonological rules and shows how this theory can be applied to sign language structure through comparison to other models he also provides insight into current theories of segmental structure commonly used feature systems as well as recurrent controversies

seminar paper from the year 2009 in the subject english language and literature studies linguistics grade a university of wales bangor course phonology language english abstract in many languages word stress is quite predictable in czech the first syllable of a word always carries the main stress in french the ultimate syllable is the most prominent each time the penultimate syllable is constantly stressed in polish as can be seen there are strict general rules with respect to a word's stress in english however the stressing of a lexeme appears to be arbitrary rather than following certain stress rules the spelling does not indicate a word's pronunciation let alone its stress moreover the stress may even differ within the same word thus *thirteen* can be stressed on the last syllable but in an environment of another word e.g. *thirteen pints* it can also be pronounced with a prominent first syllable in order to keep *eurhythmy* nevertheless it looks like native speakers have a perceptual ability to say how many syllables a word has and to tell which syllable receives the most stress therefore carr 1999 considers three trisyllabic non english words *gigondas*, *zaventem* and *tavola* the author points out that english speakers always tend to stress the penultimate syllable mispronouncing each of these words why do speakers with english as their mother tongue react in this way is this a proof of generalisation and existing stress patterns in this essay it is discussed whether the primary stress of singular words has to be learned e.g. like their spelling or the sequence of their phonemes or if the stressing of a lexeme follows internalized rules due to a lack of space secondary stress shall be excluded here for a more concise analysis of the issue three main bases concerning primary stress patterns are examined the syntactic morphological and phonological information of a word
