many books have been written about the design construction and maintenance of valvetrains but until now information has been scattered and difficult to find this comprehensive book will serve as your single resource providing a systematic introduction to valvetrain systems and components focusing on the fundamental concepts this book enables you to appreciate design and material considerations while at the same time understanding the difficulties in designing valvetrains to satisfy functional requirements and manufacturing challenges

this book reports on a novel approach for generating mechanical energy from different external heat sources using the body of a typical piston engine with valves by presenting simple yet effective numerical models the authors show how this new approach which combines existing internal combustion technology with a lubrication system is able to offer an economic solution to the

problem of mechanical energy generation in piston engines their results also show that a stable heat generation process can be guaranteed outside of the engine the book offers a detailed report on physical and numerical models of 4 stroke and 2 stroke versions of the ehve together with different models of heat exchange valves and results of their simulations it also delivers the test results of an engine prototype run in laboratory conditions by presenting a novel theoretical framework and providing readers with extensive knowledge of both the advantages and challenges of the method this book is expected to inspire academic researchers advanced phd students and professionals in their search for more effective solutions to the problem of renewable energy generation
