this is a step by step introduction to object oriented software development it is suitable for teaching and for self study by practising software engineers seeking to add rigour to their techniques seven complete case studies are included along with several smaller examples derived from small software projects developed for and delivered to real users these examples make use of a bridge process which presents a systematic approach for developing analysis models and unfolding these incrementally and iteratively through to design models and implementation the process could be viewed as one example of unified software development and has the potential of being scalable to large software problems it also

provides a model for organising deliverables obtained throughout different phases of the software life cycle these case studies provide a medium for experimental use and act as templates that can be tailored by readers to fit their specific needs and circumstances
