over the past ten years the discovery of extrasolar planets has opened a new field of astronomy and this area of research is rapidly growing from both the observational and theoretical point of view the presence of many giant exoplanets in the close vicinity of their star shows that these newly discovered planetary systems are very different from the solar system new theoretical models are being developed in order to understand their formation scenarios and new observational methods are being implemented to increase the sensitivity of exoplanet detections in the present book the authors address the question of planetary systems from all aspects starting from the facts the detection of more than 300 extraterrestrial planets they first describe the various methods used for these discoveries and propose a synthetic analysis of their global properties they then consider the observations of young stars and circumstellar disks and address the case of the solar system as a specific example different from the newly discovered systems then the study of planetary systems and of exoplanets is presented from a more theoretical point of view the book ends with an outlook to future astronomical projects and a description of the search for life on exoplanets this book addresses students and researchers who wish to

better understand this newly expanding field of research

the high redshift galaxies became a distinct research field during the final decade of the 20th century at that time the helix and other radio telescope techniques made it possible to identify significant samples of such objects and the new generation of 8 to 10 m telescopes resulted in the first good spectroscopic data today the high redshift galaxies have developed into one of the important topics of astrophysics accounting for about 5-10% of the publications in the major scientific journals devoted to astronomy because high redshift galaxies is a rapidly developing field and since new results are published constantly writing a book on this topic is challenging on the other hand in view of the large amount of individual results now in the literature and in view of the still growing interest in this topic it appears worthwhile to summarize and evaluate the available data and to provide an introduction for those who wish to enter this field or who for various reasons might be interested in its results the end of the first decade of the 21st century appears to be a good point in time to attempt such a summary the current generation of ground based 8 to 10 m optical telescopes the hubble space telescope and the most important large radio telescopes have by now been in operation since about one or two decades although these instruments will continue to produce important scientific results for some time to come many of the initial programs exploiting their unique new possibilities have been completed

readers today are especially thrilled by the prospect of good news drought and global warming civil war and famine poverty and economic inequity yes bad news abounds this book by dr stephen wilkerson on the other hand is about hope and optimism for the future the recorded history of our world is largely one of a sometimes worthy patriarchal striving it has however all too often been tarnished marred and horribly disfigured by the hatreds intolerance and destruction that have accompanied it and the good news there is another way poignantly and persuasively outlined nearly two hundred years ago by johann wolfgang von goethe involving the divine feminine goethe's masterpiece faust involves an immensely intelligent but profoundly narcissistic man who cruelly and selfishly exploits and ultimately ruins the life of an innocent maiden in the legend on which goethe's great work is based faust understandably winds up in hell just as he does in

virtually every version of this well known wager with the devil but in goethe s interpretation the deeply flawed protagonist is received into heaven by the mother of god herself how and why can this be mankind s long history of heroic accomplishment has never been sufficiently tempered by a sense of global community and cooperation that mitigate the horror and devastation that ever seem to march along beside a single minded struggle to achieve and prevail and how may this missing unity be brought about alchemy as understood in this book has nothing to do with an early and misguided chemistry and everything to do with the sort of individual transformation necessary for a better more gracious more inclusive world the millennial patterns of blind violence and repression can only be ameliorated by a thoughtful and genuine embrace of open minded reception of difference and heart felt valuation of a larger borderless world in which all grow together rather than further apart such is the promise of the final words in goethe s faust the divine feminine leads us forward
