what is lean whether referring to manufacturing operations or maintenance lean is about doing more with less less effort less space fewer defects less throughput time lower volume requirements less capital for a given level of output etc the need to provide the customer more value with less waste is a necessity for any firm wanting to stay in business especially in today s increasingly global market place and this is what lean thinking is all about lean operations are difficult to sustain more lean manufacturing plant transformations have been abandoned than have achieved true lean enterprise status there are solid and recurring reasons for both of these conditions the most significant of these reasons is that production support processes have not been pre positioned or refined adequately to assist the manufacturing plant in making the lean transformation and the most significant of the support functions is the maintenance operation which determines production line equipment reliability moving the maintenance operation well into its own lean transformation is a must do prerequisite for successful manufacturing plant or any process plant lean transformations this handbook provides detailed step by step fully explained processes for each phase of lean maintenance implementation providing examples checklists and methodologies of a quantity detail and practicality that no previous publication has even approached it is required reading and a required reference for every plant and facility that is planning or even thinking of adopting lean as their mode of operation a continuous improvement strategy using new lean principles eliminate wasteful practices from your manufacturing or chemical processes increasing the profitability of your plant save thousands of dollars a year on new equipment by keeping your existing equipment maintained using this revolutionary method

what is in creating lean dealers creating lean dealers is a diy guide to enable dealers to achieve such a step change for themselves it works through using examples diagrams and detailed instructions how to transform performance in service and repair then it goes on to describe how the same logic can be applied to all other areas of the dealer business to give a win win win for customers dealer staff and shareholders the journey to becoming a lean dealer begins by getting a real understanding of two things the ability of the processes in the dealership to deliver right first time on time at every step a measure that authors david brunt and john kiff call customer fulfilment because it is the core of what customers value the actual demand on those processes and separating it into different types the next step is to use these measures together with a map of the current state of the process to define and prioritise what the problems are and then address them with the teams who do the work in a structured way using the plan do check act method of improvement a series of questions then guides the dealer to develop a future state map of the process a picture of what the process will look like typically in 6 months time when the problems have been addressed and some of the wastes eliminated so that more of the time is spent creating the value that customers want what lean thinkers call flow an accompanying action plan lists the bite sized steps needed to achieve the transformation but like every transformational change management plays a critical role without a fully committed ceo leading from the top improvements are almost certainly doomed to fail it soon becomes apparent that management has to question and sometimes unlearn many of its traditional management methods core to this is shifting the mind set from managing results to managing processes using visual progress boards rather than computers on a daily or even an hourly basis because good results are a direct product of good processes
