parallel computational fluid dynamics cfd is an internationally recognised fast growing field since 1989 the number of participants attending parallel cfd conferences has doubled in order to keep track of current global developments the parallel cfd conference annually brings scientists together to discuss and report results on the utilization of parallel computing as a practical computational tool for solving complex fluid dynamic problems this volume contains the results of research conducted during the past year subject areas covered include novel parallel algorithms parallel euler and navier stokes solvers parallel direct simulation monte carlo method and parallel multigrid techniques the content of the book also demonstrates that considerable effort is being made to utilize parallel computing to solve a variety of fluid dynamics problems in topics such as climate modeling consultation aerodynamics and in many other areas readers of this book will gain a valid insight into the exciting recent developments in parallel cfd research

models are often the only way of interpreting measurements to investigate long range transport and this is the reason for the emphasis on them in many research programs b e a fisher a review of the processes and models of long range transport of air pollutants atmospheric environment 17 1983 p 1865 mathematical models are potentially at least powerful means in the efforts to study transboundary transport of air pollutants source receptor relationships and efficient ways of reducing the air pollution to acceptable levels a mathematical model is a complicated matter the development of which is based on the use of i various mechanisms describing mathematically the physical and chemical properties of the studied phenomena ii different mathematical tools first and foremost partial differential equations iii various numerical methods iv computers especially high speed computers v statistical approaches vi fast and efficient visualization and animation techniques vii fast methods for manipulation with huge sets of data input data intermediate data and output data
