modern cyber systems acquire more emergent system properties as far as their complexity increases cyber resilience controllability self organization proactive cyber security and adaptability each of the listed properties is the subject of the cybernetics research and each subsequent feature makes sense only if there is a previous one cyber resilience is the most important feature of any cyber system especially during the transition to the sixth technological stage and related industry 4 0 technologies artificial intelligence ai cloud and foggy computing 5g iot iiot big data and etl q computing blockchain vr ar etc we should even consider the cyber resilience as a primary one because the mentioned systems cannot exist without it indeed without the sustainable formation made of the interconnected components of the critical information infrastructure it does not make sense to discuss the existence of 4 0 industry cyber systems in case when the cyber security of these systems is mainly focused on the assessment of the incidents probability and prevention of possible security threats the cyber resilience is mainly aimed at preserving the targeted behavior and cyber systems performance under the conditions of known about 45 as well as unknown the remaining 55 cyber attacks this monograph shows that modern industry 4 0 cyber systems do not have the required cyber resilience for targeted performance under heterogeneous mass intruder cyber attacks the main reasons include a high cyber system structural and functional complexity a potential danger of existing vulnerabilities and sleep hardware and software tabs as well as an inadequate efficiency of modern models methods and tools to ensure cyber security reliability response and recovery

the manifest purposes of integrating an employer provided pension plan with social security are 1 to ensure retirement income adequacy for all covered employees and 2 to ensure retirement income equity defined as equal total replacement rates for all employees regardless of salary level the focus of this paper however is on an equally important and perhaps latent consequence of integration the alteration of the risk bearing relationships between employees employers and the government vis a vis social security benefits the main alteration is that the employer in effect insures his covered employees against adverse changes in their social security retirement benefit using the option pricing methodology of modern contingent claims analysis we develop a formal model to explore the quantitative

aspects of this change while the focus of the analysis is on full integration we do explicitly deal with various degrees of partial integration as is currently practiced we also analyze the effects of a switch from a non integrated to an equivalent cost integrated plan when private benefits are fixed in nominal terms and when they are indexed in this connection we examine how integrated plans are affected when the sponsor makes ad hoc post retirement benefit increases we also consider the incentive effects on worker mobility of the adoption of integrated plans the analysis is also used to highlight what we believe to be important unintended consequences of integrating pension plans with social security
