this book comprehensively addresses the physics and engineering aspects of human physiology by using and building on first year college physics and mathematics topics include the mechanics of the static body and the body in motion the mechanical properties of the body muscles in the body the energetics of body metabolism fluid flow in the cardiovascular and respiratory systems the acoustics of sound waves in speaking and hearing vision and the optics of the eye the electrical properties of the body and the basic engineering principles of feedback and control in regulating all aspects of function the goal of this text is to clearly explain the physics issues concerning the human body in part by developing and then using simple and subsequently more refined models of the macrophysics of the human body many chapters include a brief review of the underlying physics there are problems at the end of each chapter solutions to

selected problems are also provided this second edition enhances the treatments of the physics of motion sports and diseases and disorders and integrates discussions of these topics as they appear throughout the book also it briefly addresses physical measurements of and in the body and offers a broader selection of problems which as in the first edition are geared to a range of student levels this text is geared to undergraduates interested in physics medical applications of physics quantitative physiology medicine and biomedical engineering

provides a better understanding of the physiological and mechanical behaviour of the human body and the design of tools for their realistic numerical simulations including concrete examples of such computational models this book covers a large range of methods and an illustrative set of applications

the initial goal of this book was to discover the ultimate purpose and meaning behind the abductions of human beings into ufos the alarming reality of which is still hardly known to the public but as this study developed it led to a series of revelations which brought us to an unexpected interpretation of this phenomenon indeed it became all too obvious that there was a connection between these abductions and the absurd path that today s human society is taking more and more measures are being implemented that are threatening the health well being and freedom of human beings the world over under the guise of security purposes those responsible for this are not only our leaders but occult forces which are exposed in this book we were therefore led to unveil what we can indeed refer to as the greatest treachery in human history extremely powerful dark forces have been acting on earth for a very long time unbeknownst to our population these forces identified in this book are directly interfering in the governance of our world and are directly opposed to the harmonious evolution of humankind putting us all in grave danger this book sheds an unprecedented new light on how this all relates to the tragic events humanity has been going through since 2020

the objective of this book is to describe techniques to investigate the behaviour of electric fields and induced currents in the human body exposed to different scenarios of extremely low frequency elf high voltage low current electromagnetic fields by means of numerical modelling with improved boundary element methods bem a variety of three dimensional anatomically shaped human body models under different exposure conditions are presented and solved the mathematical formulation for the case of human exposure to elf electromagnetic fields departing from maxwell equations and for the electrical properties of biological tissue is provided the underpinning ideas of the boundary element method applied to elf fields in the human body are presented a literature survey including electrical properties of tissues relevant to low frequency calculations has been compiled and included in one chapter a novel improved bem approach is introduced in order to solve this type of problems leading to more accurate results and more efficient calculations the developed methodology is applied to three different case studies i overhead power transmission lines ii power substation rooms and iii pregnant woman including foetus and evolving scenarios in all the cases a sensitivity analysis investigating the influence of varying geometrical and electrical properties of the tissues has been conducted the results obtained allow to identify situations of high and low exposure in the different parts of the body and to compare with existing exposure guidelines
