this and its companion volume 2 comprise the proceedings of the international symposium on solution behavior of surfactants theoretical and applied aspects organized under the auspices of the 11th northeast regional meeting of the american chemical society held in potsdam n y june 30 july 3 1980 this symposium represented the third event in the series of symposia dealing with the topic of surfactants in solution the first symposium was held in albany n y in 1976 under the title micellization solubility and microemulsions the proceedings of which have been documented in a two volume set the second was held under the title solution chemistry of surfactants in 1978 in knoxville tn and the proceedings of this event have also been properly chronicled apropos the fourth biennial symposium in this series is entitled international symposium on surfactants in solution k l mittal and b lindman cochairmen and is scheduled to be held from june 27 to july 2 1982 in lund sweden since these biennial events have been very successful and important in bringing researchers with varied interests together and in stimulating interdisciplinary communication so the plans are to continue these on a regular basis with a change in venue for each meeting

recent publications in food engineering concern mainly food process engineering which is related to chemical engineering and deals primarily with unit operations and unit processes as applied to the wide variety of food processing operations relatively less attention is paid to the design and operation of food processing equipment which is necessary to carry out all of the food processes in the food plant significant technical advances on processing equipment have been made by the manufacturers as evidenced by the efficient modern food processing plants there is a need to relate advances in process engineering to process equipment and vice versa this book is an attempt to apply the established principles of transport phenomena and unit operations to the design selection and operation of food processing equipment since food processing equipment is still designed empirically due to the complexity of the processes and the uncertainty of food properties description of some typical industrial units is necessary to understand the operating characteristics approximate values and data are used for illustrative purposes since there is an understandable lack of published industrial data

offering invaluable insights from a chemist with over 35 years experience in the industry this practical guide incorporates numerous practical examples and case studies to explain the concepts included here the author explains the processes involved in product design how to set up experiments and ultimately how to scale up among the host of topics covered is a discussion of recent advances in the fundamentals and
