in this book professor ghahreman khodadad illuminates the basis of human behavior by examining the structures that underline antisociality the book's central thesis is that antisocial people are so thanks to biological and neurological structures the

principle of structure to function is used to argue that the brain without us being conscious of it produces our behaviors if this claim is correct then antisocial individuals are not accountable for their antisocial behavior and they should be treated respectfully instead of being punished furthermore prisons should accordingly be converted into rehabilitation treatment and behavioral research centers this is a book for the general reader who is interested in the basis of human behavior it should also be of interest to psychologists psychiatrists neuroscientists geneticists neurobiologists and philosophers
