in this chapter we described issues in conducting intervention research with students with learning disabilities on the secondary level we maintained that interventions should be well grounded in theories of learning as well as characterizations of learning disabilities pressley scruggs mastropieri 1989 that they should first be conducted in a series of highly controlled laboratory like experiments to carefully assess the potential

utility of the intervention and that if the intervention is successful in highly controlled settings it should then be evaluated in classroom applications we maintained that research designs should evolve as the research questions become more applied and that the results of laboratory research should be used to support the findings of classroom applications finally we described several research designs that we have found useful in conducting classroom intervention research there is a great deal more to conducting intervention research of course than experimental or quasi experimental design intervention strategies likely to be effective must be identified relevant literature must be reviewed experimental materials must be developed and cooperative schools teachers parents and students must be located nevertheless inadequate research designs can invalidate the best and most successful efforts in all of these areas while effective and practical research designs can do much to document the best practices and advance our knowledge of effective interventions with students with learning disabilities references brigham f j scruggs t e mastropieri m a 1992

project report from the year 2009 in the subject didactics common didactics educational objectives methods vanier college course research methods language english abstract this pilot study consists of research about academic achievement and ld students our research project was initially to contribute to empirical data analysis on the question of how learning disabilities affect a college student s academic achievement and social life however due to certain practical issues there was a shift in our research question the purpose of our study is to determine the factors that hinder ld students in their academic achievement and social life and to propose solutions that help ld students academically and socially we hypothesized that learning disabilities could negatively affect academic achievement and social life in college regardless of gender or cultural background and that there exist factors that hinder them in their academic achievement and social life after interviewing a convenient sample of four different students who share similar learning disabilities we found out that three out of four ld students require extra time to study and understand they achieve well in school their heavy course workload and the teaching methods used hinder them in their learning process however the learning centre and other academic services help ld students to improve their academic performance some interviewees claimed that being more outgoing and open minded with their learning disabilities help them in their long term social relationships
