Dr. Jo Boaler may be the only mathematician since the new math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it. His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains by teaching the essence of arithmetic in sensible ways and appealing to children's love of games, songs, and movement. He's proven that virtually all children can learn arithmetic, the foundation of algebra, higher mathematics, science, technology, and more even music when children understand arithmetic, they own it. It's no longer just their teacher's math; it's their math. America's children are being held back in math because of how arithmetic is drug out in elementary school. Virtually every textbook-based elementary school math program in use today is mind-numbing in its repetitiveness from grade to grade. The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized. Research shows that the human brain is not designed to remember things learned by rote when no longer practiced. That's acknowledged in the use-it-or-lose-it aphorism that states the obvious: that we remember what we use and forget what we don't. You know that to be true if you've ever forgotten things you once knew as well as your own name, things like an old address or a license plate number. Every child can understand base ten numeration when taught hands-on with arithmetic blocks. Thereby every child can understand base ten arithmetic and every child can learn how to count out the number facts like  $5 + 7 = 12$ ,  $17 - 8 = 9$ ,  $6 \times 7 = 42$ , and  $56 \div 7 = 8$  and if they forget, one never has to guess and risk ridicule and bad grades. If they guess wrong. What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget.

Teach students to write about math so they can improve their conceptual understanding in authentic ways. This resource offers hands-on strategies you can use to help students in grades 6-8 discuss and articulate mathematical ideas, use correct vocabulary, and compose mathematical arguments. Part one discusses the importance of emphasizing language to make students' thinking visible and to sharpen communication skills while attending to precision. Part two provides a plethora of writing prompts and activities: visual prompts, compare and contrast, the answer is, topical questions, writing about journal prompts, poetry, cubing, and think-dots-raft-question quilts, and always/sometimes/never. Each activity is accompanied by a clear overview plus a variety of examples. Part three offers a crosswalk of writing strategies and math topics to help you plan as well as a sample anchor task and lesson plan to demonstrate how the strategies can be integrated throughout.

each section you'll also find blackline masters that can be downloaded for classroom use with this book's engaging standards-based activities you'll have your middle school students communicating like fluent mathematicians in no time
