the great challenge for the future will be the task of increasing food production with less  
water particularly in countries with limited water and land resources in the context of  
improving water productivity there is a growing interest in deficit irrigation an irrigation  
practice whereby water supply is reduced below maximum levels and mild stress is allowed  
with minimal effects on yield this publication presents a range of studies carried out for

several crops and under different ecological conditions showing the various options and practices of deficit irrigation and the impacts of reduced irrigation water supply on crop yield the synthesis shows that deficit irrigation can result in substantial water savings with little impact on the quality and quantity of the harvested yield
