originally published in 1994 this second edition of corrosion in
the petrochemical industry collects peer reviewed articles

written by experts in the field of corrosion that were specifically chosen for this book because of their relevance to the petrochemical industry this edition expands coverage of the different forms of corrosion including the effects of metallurgical variables on the corrosion of several alloys it discusses protection methods including discussion of corrosion inhibitors and corrosion resistance of aluminum magnesium stainless steels and nickels it also includes a section devoted specifically to petroleum and petrochemical industry related issues

this book introduces corrosion mechanisms and protection technologies for metallic and non metallic materials a focus lies on the protection of high tech materials with applications in space and environments exposed to unclear radiation and biological hazards the determination measurement and control of different corrosion mechanisms are discussed in detail combining theories with case studies it is an essential reference for material scientists and engineers

this four volume reference work builds upon the success of past editions of elsevier s corrosion title by shreir jarman and burstein covering the range of innovations and applications that have emerged in the years since its publication developed in partnership with experts from the corrosion and protection centre at the university of manchester shreir s corrosion meets the research and productivity needs of engineers consultants and researchers alike incorporates coverage of all aspects of the corrosion phenomenon from the science behind corrosion of metallic and non metallic materials in liquids and gases to the management of corrosion in specific industries and applications features cutting edge topics such as medical applications metal matrix composites and corrosion modeling covers the benefits and limitations of techniques from scanning probes to electrochemical noise and impedance spectroscopy

one of the main ongoing challenges for any engineering enterprise is that systems are built of materials subject to environmental degradation whether working with an airframe integrated circuit bridge prosthetic device or implantable drug delivery system understanding the chemical stability of materials remains a key element in determining t
