this book constitutes the refereed proceedings of the 4th ifip wg 8 1 working conference on method engineering me 2011 held in paris france in april 2011 the 13 revised full papers

and 6 short papers presented together with the abstracts of two keynote talks were carefully reviewed and selected from 30 submissions the papers are organized in topical sections on situated method engineering method engineering foundations customized methods tools for method engineering new trends to build methods and method engineering services

a comprehensive reference manual to the certified software quality engineer body of knowledge and study guide for the csqe exam

flins originally an acronym for fuzzy logic and intelligent technologies in nuclear science is now extended to include computational intelligence for applied research the contributions of the flins conference cover state of the art research development and technology for computational intelligence systems with special focuses on data science and knowledge engineering for sensing decision support both from the foundations and the applications points of view

this volume includes contributions on field theory and advanced computational electromagnetics electrical machines and transformers optimization and interactive design electromagnetics in materials coupled field and electromagnetic components in mechatronics induction heating systems bioelectromagnetics and electromagnetics in education

currently we are at the beginnings of widespread wireless connectivity and ubiquitous computing the is merging with a variety of technologies cell phones laptop computers hand held organisers information appliances and gps and other sensors the capability for access anytime and anywhere is here the increasing frequency of cell phone calls at inappropriate times testifies that people no longer can easily control access devices can determine where they are located and can make a range of information available to users as well as make users available to others or their devices we have proposed a general technique that promises to assist in mediating access it capitalises on advantages afforded by computation hollan stometta 1992 we first described the negotiation technique in the context of problems involved in scheduling meetings and then showed that similar issues which at first may seem unrelated but in fact have much in common arise in other contexts one such activity gaining immediate access is currently of growing importance because of expanding connectivity via wireless technology cell phones and related technologies make it possible to be constantly available for synchronous interaction at times this can be advantageous but the associated costs and benefits result in a complex tradeoff space for designers as well as users
