in this book we synthesize a rich and vast literature on econometric challenges associated with accounting choices and their causal effects identification and estimation of endogenous causal effects is particularly challenging as observable data are rarely directly linked to the causal effect of interest a common strategy is to employ logically consistent probability assessment via bayes theorem to connect observable data to the causal effect of interest for example the implications of earnings management as equilibrium reporting behavior is a centerpiece of our explorations rather than offering recipes or algorithms the book surveys our periences with accounting and econometrics that is we focus on why rather than how the book can be utilized in a variety of venues on the surface it is geared ward graduate studies and surely this is where its roots lie if we re serious about our studies that is if we tackle interesting and challenging problems then there is a natural progression our research addresses problems that are not well derstood then incorporates them throughout our curricula as our understanding improves and to improve our understanding in other words learning and c riculum development are endogenous for accounting to be a vibrant academic discipline we believe it is essential these issues be confronted in the undergr uate classroom as well as graduate studies we hope we ve made some progress with examples which will encourage these developments

the handbook is a definitive reference source and teaching aid for econometricians it examines models estimation theory data analysis and field applications in econometrics comprehensive surveys written by experts discuss recent developments at a level suitable for professional use by economists econometricians statisticians and in advanced graduate econometrics courses for more information on the handbooks in economics series please see our home page on elsevier nl locate hes

uncertain decisions bridging theory and experiments presents advanced directions of thinking on decision theory in particular the more recent contributions on non expected utility theory fuzzy decision theory and case based theory this work also provides theoretical insights on measures of risk aversion and on new problems for general equilibrium analysis it analyzes how the thinking that underlies the theories described above spills over into real decisions and how the thinking that

underlies these real decisions can explain the discrepancies between theoretical approaches and actual behavior this work elaborates on how the most recent laboratory experiments have become an important source both for evaluating the leading theory of choice and decision and for contributing to the formation of new models regarding the subject

this is one of the few titles that brings together studies that adopt laboratory based experimental economics methods to study an array of business and policy issues spanning the entire business domain including accounting economics management marketing and cognitive science

this research handbook explores the interactions between law and time demonstrating how both are pivotal in the organization of human activities including legal proceedings and societal functions it expands upon the structural relationship between law and time examining how societies and legal systems coordinate around timing conventions and how the use of time constraints can alter litigation and deter socially destructive behavior

the book integrates agent based modeling and network science it is divided into three parts namely

foundations primary dynamics on and of social networks and applications the authors begin with the network origin of agent based models known as cellular automata and introduce a number of classic models such as schelling's segregation model and axelrod's spatial game the text shows that the modern network science mainly driven by game theorists and sociophysicists has inspired agent based social scientists to develop alternative formation algorithms known as agent based social networks

this is the first book that examines the diverse range of experimental methods currently being used in the social sciences gathering contributions by working economists engaged in experimentation as well as by a political scientist psychologists and philosophers of the social sciences until the mid twentieth century most economists believed that experiments in the economic sciences were impossible but that's hardly the case today as evinced by the fact that vernon smith an experimental economist and daniel kahneman a behavioral economist won the nobel prize in economics in 2002 however the current use of experimental methods in economics is more diverse than is usually assumed as the concept of experimentation underwent considerable abstraction throughout the twentieth century the areas of the social sciences in which experiments are applied are expanding creating renewed interest in and multifaceted debates on the way experimental methods are used this book sheds new light on the diversity of experimental methodologies used in the social sciences the topics covered include historical insights into the evolution of experimental methods the necessary performativity of experiments i.e. the dynamic interaction with the social contexts in which they are embedded the application of causal inferences in the social sciences a comparison of laboratory field and natural experiments and the recent use of randomized controlled trials rcts in development economics several chapters also deal with the latest heated debates such as those concerning the use of the random lottery method in laboratory experiments

these 22 contributions to the economic theory of non co operative bargaining show how incomplete information small numbers of agents and the rules governing negotiation interact to cause inefficiency indeterminacy and delay in bargaining outcomes

a companion to the bestseller the impact of economic policies on poverty and income distribution this title deals with theoretical challenges and cutting edge macro micro linkage models the authors

compare the predictive and analytical power of various macro micro linkage techniques using the traditional rhg approach as a benchmark to evaluate standard policies such as a typical stabilization package and a typical structural reform policy
