as technology continues to advance it is critical for businesses to implement systems that can support the transformation of data into information that is crucial for the success of the company without the integration of data both structured and unstructured mining in business intelligence systems invaluable knowledge is lost however there are currently many different models and approaches that must be explored to determine the best method of integration integration challenges for analytics business intelligence and data mining is a relevant academic book that provides empirical research findings on increasing the understanding of using data mining in the context of business intelligence and analytics systems covering topics that include big data artificial intelligence and decision making this book is an ideal reference source for professionals working in the areas of data mining business intelligence and analytics data scientists it specialists managers researchers academicians practitioners and graduate students

learn to use and not be used by data to make more insightful decisions the availability of data and various forms of ai unlock countless possibilities for business decision makers but what do you do when you feel pressured to cede your position in the decision making process altogether decision intelligence for dummies pumps the brakes on the growing trend to take human beings out of the decision loop and walks you through the best way to make data informed but human driven decisions the book shows you how to achieve maximum flexibility by using every available resource and not just raw data to make the most insightful decisions possible in this timely book you ll learn to make data a means to an end rather than an end in itself by expanding your decision making inquiries find a new path to solid decisions that includes but isn t dominated by quantitative data measure the results of your new framework to prove its effectiveness and efficiency and expand it to a whole team or company perfect for business leaders in technology and finance decision intelligence for dummies is ideal for anyone who recognizes that data is not the only powerful tool in your decision making toolbox this book shows you how to be guided and not ruled by the data

do you want to understand what big data is all about but you don't get all the hype are you intrigued by the idea of building a career around big data and data science but you just don't understand it if so this book could be what you are looking for

this book studies data analytics and intelligence using boolean structure chapters dive into the theories foundations technologies and methods of data analytics and intelligence the primary aim of this book is to convey the theories and technologies of data analytics and intelligence with applications to readers based on systematic generalization and specialization sun uses the boolean structure to deconstruct all books and papers related to data analytics and intelligence and to reorganize them to reshape the world of big data data analytics analytics intelligence data science and artificial intelligence multi industry applications in business management and decision making are provided cutting edge theories technologies and applications of data analytics and intelligence and their integration are also explored overall this book provides original insights on sharing computing insight computing platform computing a calculus of intelligent analytics and intelligent business analytics meta computing data analyticizing ddpp descriptive diagnostic predictive and prescriptive computing and analytics this book is a useful resource with multi industry applications for scientists engineers data analysts educators and university students

the need to develop a capability to process increasing amounts of intelligence information input by battlefield systems to divisions has led to the establishment of an army work program to determine user requirements for a tactical operations system tos as part of the program a series of software packages is being evaluated by the army research institute for the behavioral and social sciences for potential inclusion as requirements for a prototype tos the first of these packages automated order of battle ob and target intelligence ti files was evaluated in the present study a series of intelligence tasks was accomplished by two groups each consisting of 10 subjects qualified as intelligence analysts both groups worked with a basic simulated tos the experimental group had access to automated ob and ti files the control group used ob and ti files in manual form automation of the files significantly increased both the accuracy and the completeness with which intelligence requirements were accomplished but did not increase the speed of completion of those requirements abstract

big data analytics for sensor network collected intelligence explores state of the art methods for using advanced ict technologies to perform intelligent analysis on sensor collected data the book shows how to develop systems that automatically detect natural and human made events how to examine people's behaviors and how to unobtrusively provide better services it begins by exploring big data architecture

and platforms covering the cloud computing infrastructure and how data is stored and visualized the book then explores how big data is processed and managed the key security and privacy issues involved and the approaches used to ensure data quality in addition readers will find a thorough examination of big data analytics analyzing statistical methods for data analytics and data mining along with a detailed look at big data intelligence ubiquitous and mobile computing and designing intelligence system based on context and situation indexing the books of this series are submitted to ei compendex and scopus contains contributions from noted scholars in computer science and electrical engineering from around the globe provides a broad overview of recent developments in sensor collected intelligence edited by a team comprised of leading thinkers in big data analytics

the two volume set ccis 2439 and ccis 2440 constitutes the proceedings of the first international conference on emerging trends in artificial intelligence data science and signal processing aids 2023 held in kanpur india in october 2023 the 25 full papers and 11 short papers in this book were carefully reviewed and selected from 260 submissions these papers focus on the topics such as artificial intelligence machine learning and signal processing

praise for the first edition full of vivid and thought provoking anecdotes needs to be read by anyone with a serious interest in research and marketing research magazine shmueli et al have done a wonderful job in presenting the field of data mining a welcome addition to the literature computing reviews com incorporating a new focus on data visualization and time series forecasting data mining for business intelligence second edition continues to supply insightful detailed guidance on fundamental data mining techniques this new edition guides readers through the use of the microsoft office excel add in xlminer for developing predictive models and techniques for describing and finding patterns in data from clustering customers into market segments and finding the characteristics of frequent flyers to learning what items are purchased with other items the authors use interesting real world examples to build a theoretical and practical understanding of key data mining methods including classification prediction and affinity analysis as well as data reduction exploration and visualization the second edition now features three new chapters on time series forecasting introducing popular business forecasting methods including moving average exponential smoothing methods regression based models and topics such as explanatory vs predictive modeling two level models and ensembles a revised chapter on data visualization that now features interactive visualization principles and added assignments that demonstrate interactive visualization in practice separate chapters that each treat k nearest neighbors and naïve bayes methods

summaries at the start of each chapter that supply an outline of key topics the book includes access to xlminer allowing readers to work hands on with the provided data throughout the book applications of the discussed topics focus on the business problem as motivation and avoid unnecessary statistical theory each chapter concludes with exercises that allow readers to assess their comprehension of the presented material the final chapter includes a set of cases that require use of the different data mining techniques and a related site features data sets exercise solutions powerpoint slides and case solutions data mining for business intelligence second edition is an excellent book for courses on data mining forecasting and decision support systems at the upper undergraduate and graduate levels it is also a one of a kind resource for analysts researchers and practitioners working with quantitative methods in the fields of business finance marketing computer science and information technology

to introduce the concepts of big data analytics for business intelligence and predictive modeling for smart tourism product design in the indian tourism industry quantitative literature survey of the contemporary research topics and application of technologies in smart tourism analytics to apply the big data analytics and business intelligence concepts in the indian tourism industry and discuss the related case studies covering various subtopics of exclusive destination branding and market intelligence for knowledge discovery to evolve big data strategy for the specific tourism product design and respective data extraction transformation and loading data in the business intelligence and data mining tools to create attractive dashboards for smart tourism application using storyboarding and human computer interaction techniques visualization techniques for descriptive data analytics and business insights intelligent decision support system for tourism destination choice

this book is a collection of the high quality research articles presented at the international conference on business intelligence and data analytics bida 2024 organized by rv institute of management rvim bengaluru india during april 2024 the book covers state of the art research articles from the researchers and practitioners working in the field of business intelligence data analytics decision support systems data warehousing and data mining big data analytics predictive and prescriptive analytics and machine learning for business applications and their real world applications

focusing on students presentations and discussions in laboratory seminars this book presents case studies on evidence based education using artificial intelligence ai technologies it proposes a system to help users complete research activities and a machine learning method that makes the system suitable for long term operation by performing data mining for discussions and automatically extracting essential

tasks by illustrating the complete process proposal implementation and operation of applying machine learning techniques to real world situations the book will inspire researchers and professionals to develop innovative new applications for education the book is divided into six chapters the first of which provides an overview of ai research and practice in education in turn chapter 2 describes a mechanism for applying data analytics to student discussions and utilizing the results for knowledge creation activities such as research based on discussion data analytics chapter 3 describes a creative activity support system that effectively utilizes the analytical results of the discussion for subsequent activities chapter 4 discusses the incorporation of a gamification method to evaluate and improve discussion skills while maintaining the motivation to participate in the discussion chapters 5 and 6 describe an advanced learning environment for honing students discussion and presentation skills two important systems proposed here are a presentation training system using virtual reality technologies and an interactive presentation discussion training system using a humanoid robot in the former the virtual space is constructed by measuring the three dimensional shape of the actual auditorium presentations are performed in the same way as in the real world and the ai as audience automatically evaluates the presentation and provides feedback in the latter a humanoid robot makes some remarks on and asks questions about students presentations and the students practice responding to it

this book looks at strategies to help companies become more intelligent connected and agile it discusses how companies can define and measure high impact outcomes and use effectively analytics technology to achieve them it also looks at the technology needed to implement the analytics necessary to achieve high impact outcomes from both analytics tool and technical infrastructure perspective also discussed are ancillary but critical topics such as data security and governance that may not traditionally be a part of analytics discussions but are essential in helping companies maintain a secure environment for their analytics and access the quality data they need to gain critical insights and drive better decision making

this book presents selected peer reviewed papers from the international conference on artificial intelligence and data engineering aide 2019 the topics covered are broadly divided into four groups artificial intelligence machine vision and robotics ambient intelligence and data engineering the book discusses recent technological advances in the emerging fields of artificial intelligence machine learning robotics virtual reality augmented reality bioinformatics intelligent systems cognitive systems computational intelligence neural networks evolutionary computation speech processing internet of things big data challenges data mining information retrieval and natural language processing given its

scope this book can be useful for students researchers and professionals interested in the growing applications of artificial intelligence and data engineering

this book brings together papers that offer conceptual analyses highlight issues propose solutions and discuss practices regarding privacy data protection and artificial intelligence it is one of the results of the thirteenth annual international conference on computers privacy and data protection cpdp held in brussels in january 2020 the development and deployment of artificial intelligence promises significant break throughs in how humans use data and information to understand and interact with the world the technology however also raises significant concerns in particular concerns are raised as to how artificial intelligence will impact fundamental rights this interdisciplinary book has been written at a time when the scale and impact of data processing on society on individuals as well as on social systems is becoming ever starker it discusses open issues as well as daring and prospective approaches and is an insightful resource for readers with an interest in computers privacy and data protection

analytics consists of collecting processing analyzing and interpreting data to derive insights we can collect data from many different sources from our gardens to our sports teams data science is the study related to information where it came from how to represent it and to transform it into something valuable which can help in developing strategies for the enhancement and growth of the business artificial intelligence ai makes it possible for machines to learn from experience adjust to new inputs and perform human like tasks using these technologies computers can be programmed to accomplish specific tasks by processing large amounts of data and recognizing patterns in the data this book aims to provide knowledge about theory techniques and applications for people who want to learn analytics data science and artificial intelligence this book covers almost all the topics which come under analytics data science and artificial intelligence one after another

the contemporary world lives on the data produced at an unprecedented speed through social networks and the internet of things iot data has been called the new global currency and its rise is transforming entire industries providing a wealth of opportunities applied data science research is necessary to derive useful information from big data for the effective and efficient utilization to solve real world problems a broad analytical set allied with strong business logic is fundamental in today s corporations organizations work to obtain competitive advantage by analyzing the data produced within and outside their organizational limits to support their decision making processes this book aims to provide an overview of the concepts tools and techniques behind the fields of data science and artificial intelligence

ai applied to business and industries the handbook of research on applied data science and artificial intelligence in business and industry discusses all stages of data science to ai and their application to real problems across industries from science and engineering to academia and commerce this book brings together practice and science to build successful data solutions showing how to uncover hidden patterns and leverage them to improve all aspects of business performance by making sense of data from both web and offline environments covering topics including applied ai consumer behavior analytics and machine learning this text is essential for data scientists it specialists managers executives software and computer engineers researchers practitioners academicians and students

this book collects research works of data driven medical diagnosis done via artificial intelligence based solutions such as machine learning deep learning and intelligent optimization physical devices powered with artificial intelligence are gaining importance in diagnosis and healthcare medical data from different sources can also be analyzed via artificial intelligence techniques for more effective results

knowledge hidden in voluminous data repositories routinely created and maintained by today s applications can be extracted by data mining the next step is to transform this discovered knowledge into the inference mechanisms or simply the behavior of agents and multi agent systems agent intelligence through data mining addresses this issue as well as the arguable challenge of generating intelligence from data while transferring it to a separate possibly autonomous software entity this book contains a methodology tools and techniques and several examples of agent based applications developed with this approach this volume focuses mainly on the use of data mining for smarter more efficient agents agent intelligence through data mining is designed for a professional audience of researchers and practitioners in industry this book is also suitable for graduate level students in computer science
