information extraction ie is a new technology enabling relevant content to be extracted from textual information available electronically ie essentially builds on natural language processing and computational linguistics but it is also closely related to the well established area of information retrieval and involves learning in concert with other promising and emerging information engineering technologies like data mining intelligent data analysis and text summarization ie will play a crucial role for scientists and professionals as well as other end users who have to deal with vast amounts of information for example from the internet as the first book solely devoted to ie it is of relevance to anybody interested in new and emerging trends in information processing technology

this book brings together current information on technology and solvents for extracting oilseeds the editors hope that this monograph will serve as a useful reference for the managers and engineers in oil extraction and its allied industries and a starting point for researchers in searching for the optimum solvent for extraction of any given oil bearing materials

ecotourism and natural resource extraction may be seen as contradictory pursuits yet in reality they often take place side by side sometimes even supported by the same institutions existing academic and policy literatures generally overlook the phenomenon of ecotourism in areas concurrently affected by extraction industries but such a scenario is in fact increasingly common in resource rich developing nations this edited volume conceptualises and empirically analyses the ecotourism extraction nexus within the context of broader rural and livelihood changes in the places where these activities occur the volume s central premise is that these seemingly contradictory activities are empirically and conceptually more alike than often imagined and that they share common ground in ethnographic lived experiences in rural settings and broader political economic structures of power and control the book offers theoretical reflections on why ecotourism and natural resource extraction are systematically decoupled and epistemologically and analytically re links them through ethnographic case studies drawing on research from around the world it should be of interest to students and professionals engaged in the disciplines of geography anthropology and development studies
