preparation procedures a selection of representative stepwise molecular protocols and a discussion on further research requirements relating to improved diagnosis this book represents a reliable and convenient reference on molecular detection and identification of major human bacterial pathogens an indispensable tool for upcoming and experienced medical veterinary and industrial laboratory scientists engaged in bacterial characterization and an essential textbook for undergraduate and graduate students in microbiology

this book focuses on the similarities and differences between substance and non substance addictions it discusses in detail the mechanisms diagnosis and treatment of substance and non substance addictions and addresses selected prospects that will shape future studies on addiction addiction is a global problem that costs millions of lives tremendous damage year after year there are mainly two types of addition substance addiction e g nicotine alcohol cannabis heroin stimulants etc and non substance addiction e g gambling computer gaming internet etc based on existing evidence both types of addiction produce negative impacts on individuals physical mental social and financial well being and share certain common mechanisms which involve a dysfunction of the neural reward system and specific gene transcription factors however there are also key differences between these two types of addiction covering these aspects systematically the book will provide researchers and graduate students alike a better understanding of drug and behavioral addictions
